SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPATT1	ADVANCED HEAT TRANSFER	3:0:0	3

**Course Objective:**

- The course will deepen to understand of conduction, convection, radiation, phase change and dimensionless numbers
- The course is design to learn the techniques for heat transfer enhancement and usage of numerical methods
- To understand for solving heat transfer problems such as heat exchangers and evaporators

**Course Content :**

General equation of heat conduction, Transient heat conduction numerical and analytical methods for the solution of transient heat conduction problems, Critical radius and optimum thickness of insulation. Free convective heat transfer under different situation and application of dimensional analysis to estimate the convective heat transfer coefficients. Heat transfer factor Reynolds number. Plot, Analogy equation for heat momentum transfer. Boiling heat transfer with particular reference to Nucleate and film boiling and estimation of boiling heat transfer coefficient. Heat transfer from condensing vapors. Nusselt equation for film type condensation of vapors over vertical surfaces and inclined tubes. View factors and emissivity factors for different situation. Radiation shield and radiation error in pyrometry. Combined conduction, convection and radiation heat transfer.

**Course Outcome:**

After learning the course, the students will be able to :

- To design and analyze the performance of heat exchangers and evaporators
- To Analyze the various analytical and numerical heat transfer problem.
- Understand the basic concepts of phase change and their coefficient, impact on heat transfer

**Texts Books :**

- Hallman J. P., Heat Transfer Operation, McGraw-Hill
- A Text Book on Heat Transfer, Universities Press; Fourth Edition

**Reference Books :**

- Sachdeva R. C., Fundamentals of Engineering Heat & Mass Transfer
- Bird, R. B., Steward, W.E. and Lightfoot E N., Transport Phenomena, Second edition, John Wiley and Sons

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPATT2	ADVANCED SEPARATION PROCESSES	3:0:0	3

**Course Objective :**

- To familiarize students with various advanced aspects of separation processes and the selection of separation processes
- To enable students to understand the principles and processes of adsorption, membrane separation and chromatography and to design an absorber or a membrane unit to achieve a specified separation
- To introduce them to new trends used in the separation technologies

**Course Content:**

Conventional Separation Processes: Absorption, Adsorption, Conventional separation processes - Distillation, Drying, Extraction, Diffusion, Leaching, Crystallization. Advances in separation techniques based on size, surface properties, ionic properties. Cross flow filtration, Electro filtration, Dual functional filter, Surface based solid-liquid separations involving a second liquid, Sirofloc filter. Bubble and Foam Fractionation: Nature of bubbles and foams, stability of foams, foam fractionation techniques, batch, continuous, single stage and multistage columns. Types and choice of membranes, Plate and frame, Spiral wound membranes, Tubular and hollow fibre membrane reactors, Membrane Permeates, Dialysis, Reverse osmosis, Nano-filtration, Ultrafiltration, Microfiltration, Dialysis, Ceramic membranes. Membrane Separation: Characteristics of organic and inorganic membranes, basis of membrane selection, osmotic pressure, partition coefficient and permeability, concentration polarization, electrolyte diffusion and facilitated transport, Industrial applications of Micro-filtration, Ultra-Filtration, Reverse Osmosis, Electro-Dialysis. Special Processes: Liquid Membrane Separation, Super-Critical Extraction, Adsorptive Separation-Pressure, Vacuum and Thermal Swing, Pervaporation and Permeation, Nano-Separation. Chromatographic Methods of Separation Gel: Solvent, Ion and High Performance Liquid Chromatography.

**Course Outcomes :**

At the end of the course, the student will be able to:

- List situations where liquid-liquid extraction might be preferred to distillation, make a preliminary selection of solvent using group-interaction rules, Size simple extraction equipment
- Differentiate between chemisorption and physical adsorption, List steps involved in adsorption of a solute, and which steps may control the rate of adsorption, explain the concept of breakthrough in fixed-bed adsorption
- Explain how crystals grow, Explain the importance of super saturation in crystallization
- Describe effects of mixing on super saturation, mass transfer, growth, and scale-up of crystallization

- Explain membrane processes in terms of the membrane, feed, sweep, retentate, permeate, and solute membrane interactions. Distinguish among microfiltration, ultrafiltration, Nano filtration, virus filtration, sterile filtration, filter-aid filtration, and reverse osmosis in terms of average pore size. Explain common idealized flow patterns in membrane modules.

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPATT3	ADVANCED FLUIDIZATION ENGINEERING	3:0:0	3

**Course Objective :**

- To study the phenomenon of fluidization with industrial processing objective
- To study the various regimes of fluidization and their mapping
- To study the design of equipments based on fluidization technique

**Course Content:**

Introduction to fluidization and applications: Phenomenon of fluidization, behavior of fluidized bed, contacting modes, advantages and disadvantages of fluidization, fluidization quality, selection of contacting mode, Fluidized Beds for Industrial Applications like coal gasification, synthesis reactions, physical operations, cracking of hydrocarbons. Mapping of fluidization regimes: Characterization of particles, mechanics of flow around single particles, minimum fluidization velocity, pressure drop versus velocity diagram, The Geldart classification of solids, fluidization with carryover of particles, terminal velocity of particles, distributor types, gas entry region of bed, pressure drop requirements, various distributor plates, design of distributor plate. Bubbling fluidized beds: Davidson model for gas flow at bubbles in a fluidized bed, the wake region and movement of solids at bubbles, coalescence and splitting of bubbles, bubble formation above a distributor, slug flow, Turbulent and fast fluidization - mechanics, flow regimes and design equations, Emulsion movement, estimation of bed properties, bubble rise velocity, scale up aspects, flow models, two phase model, K-L model. Solids movement and Gas dispersion: Vertical and horizontal movement of solids, Dispersion model, large solids in beds of smaller particles, staging of fluidized beds Gas dispersion in beds, gas interchange between bubble and emulsion, estimation of gas interchange coefficient, Heat and mass transfer in fluidized systems, Mixing in fluidized systems - measurements and models. Entrainment or Elutriation of Fluidized Beds , Reactors : Entrainment and elutriation, Freeboard behavior, gas outlet, entrainment from tall vessel, freeboard entrainment model, high velocity fluidization, pressure drop in turbulent and fast fluidization, Slugging, Spouted beds, Circulating Fluidized Beds. Mathematical model of a homogeneous fluidized bed, Design of catalytic reactors, pilot plant reactors, information for design, bench scale reactors, design decisions, deactivating catalysts, Design of no catalytic reactors, kinetic models for conversion of solids, models for shrinking particles, conversion of solids of unchanging size

**Course Outcomes :**

At the end of the course, the student will be able to:

- Performing and understanding the behavior fluidization in fluidized bed
- Evaluate the characterization of particles and power consumption in fluidization regimes
- Understanding the applicability of the fluidized beds in chemical industries

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPATP1	ADVANCED REACTION ENGINEERING	3:0:0	3

**Course Objective :**

This Subject is essential for Design of Reactor especially heterogeneous reactors. Students will learn the energy balance, temperature and concentration profiles in different reactors, advance design aspects of multiple reactors; students will get insight of importance of population balance of particles.

**Course Content:**

Non-elementary Kinetics Importance: Approximations for formulations of Rate laws, Formulations of Kinetic model. Effect of flow on conversions in Reactors: Semi batch Reactors Importance and examples of applications , Material Balance on Semi batch Reactor, Multiple reaction in Semi batch Reactors, Conversion Vs Rate in Reactors, Use of POLYMATHS to solve the equations and understanding the profiles Non-Isothermal reaction modelling in CSTR & Semi-Batch reactor: Energy Balance equations for CSTR, PFR and Batch reactors, Adiabatic operations Temperature conversion profiles in PFR, CSTR, Steady state tubular reactor with heat exchange. Need for Multi-staging CSTR with multiple stages: Exothermic and Endothermic Reaction with examples, CSTR with heat effects, Multiple reactions in CSTR and PFR with heat effects, Semi batch Reactors with heat exchange. Design of PFR and Packed Bed Tubular Reactors: Radial and Axial mixing in Tubular reactors, unsteady state in non-isothermal energy balance, CSTR, Energy balance in Batch Reactors, Volume of reactors calculations for non-isothermal reactors. Optimal Design of Reactors for Reversible exothermic reactions: Unsteady state non-isothermal reactor design, adiabatic operation in batch, Heat effects in semi batch unsteady state operation. Auto thermal Plug flow reactors and packed tubular reactors. PFR with inter stage cooling. Shift of Energy and material balance lines for reversible reactions in CSTR, Examples of optimal design of PFR and Semi batch and CSTR Exothermic Reactions. Catalytic reactions: Theory and modelling: Global rate of reaction, Types of Heterogeneous reactions Catalysis, Different steps in catalytic reactions, Theories of heterogeneous catalysis. Steady State approximation, formulations of rate law, Rate laws derived from the PSSH, Rate controlling steps, Eiley-Rideal model, Reforming catalyst example :Finding mechanism consistent with experimental observations Evaluation of rate law parameters, packed beds : Transport and Reactions, Gradients in the reactors : temperature. Porous media reactors: Mass transfer coefficients, Flow effects on spheres tube and cylinders, External Mass Transfer pore diffusion, structure and concentration gradients Internal Effectiveness Factor Catalytic wall reactor: limiting steps reactions and mass transfer limiting Porous catalyst on tube wall reactors Design of packed bed porous catalytic reactors: Mass transfer limited reactions in packed bed. Fluidized bed reactor modelling: Geldart Classification of powders, Fixed bed vs. fluidized bed Why fluidized bed, important parameters pressure drop in fixed bed, Class I model Arbitrary Two Region Flow Models, Class II Chemical Reactor: Plug Flow or Mixed Flow Model. Class III Modelling

the Bubbling Fluidized Bed Reactor, BFB, The Kunii-Levenspiel bubbling bed model, Gas Flow Around and Within a Rising Gas Bubble in a Fine particle BFB, Reactor performance of BFB. Application of Population Balance Equations for reactor modelling: Particle size distribution, Distribution Functions in Particle Measuring Techniques, Particle distribution model in colloidal particle synthesis in batch reactor, Moments of Distribution, Nucleation rate based on volumetric holdup versus crystal growth rate.

**Course Outcomes :**

At the end of the course, the student will be able to:

- Evaluate heterogeneous reactor performance considering mass transfer limitations
- Perform the energy balance and obtain concentration profiles in multiphase reactors
- Estimate the performance of multiphase reactors under non-isothermal conditions
- Understand application of modern reactor technologies

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPATP2	ADVANCED WASTEWATER TREATMENT TECHNOLOGY	3:0:0	3

**Course Objective :**

- It encompasses water and wastewater analytical and instrumental methods of analysis
- Design considerations of various unit operations and processes of water treatment facilities
- Learn aeration, sedimentation, coagulation and flocculation processes. Able to explain settling equations
- It also deals with biological sludge handling and treatment

**Course Contents :**

Introduction, Health and environment concern in wastewater management. Water quality: Definitions, characteristics and perspectives. The hydraulic cycle, Water quality, Physical, chemical and biological water quality parameters. Measurement of organic concentration, BOD, COD and TOC Test, reaction between BOD, COD, & TOC, Most probable number (MPN), Measurement of biological characteristics, Toxicity Test. Reactor used for transient of wastewater mass balance analysis, Modelling of ideal flow in reactor, Modelling of treatment process, Kinetic of processes, Process selection. Physical unit operations: Screening, mixing, Gravity separation, Primary sedimentation, Coagulation, Secondary treatment of waste water, adsorption. Biological waste water treatment, Micro-organism growth kinetics, modelling of suspended froth treatment process, Aerobic biological oxidation, Anaerobic process, heavy metal pollution remedies

**Course Outcomes:**

At the end of the course, the student will be able to:

- Explain the need for wastewater treatment, categorize the wastewater based on characteristics, and illustrate reactor types in wastewater treatment
- Understand and apply the design principles and criteria in designing units such as screen, grit chamber, primary settling tank. Establish bio-kinetic constants in the engineering design of wastewater treatment processes
- Describe the design criteria and design the suspended and attached growth biological wastewater treatment systems like activated sludge process, trickling filter
- Plan and perform aerobic and anaerobic treatment processes on both domestic wastewater and industrial effluent

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPATP3	ADVANCED CHEMICAL PROCESS MODELLING	3:0:0	3

**Course Objective :**

- To understand the systematic approaches for the development of modelling
- To understand the mathematical modelling of chemical processes

**Course Contents :**

Introduction to Modelling: a systematic approach to model building, classification of models. Development of steady state and dynamic, lumped and distributed parameter models based on conservation principles. Models based on Transport Phenomenon Principles: molecular description, microscopic and macroscopic description, multiple and maximum gradient description, boundary conditions. Classification of transport phenomena models: Terminology of mathematical models, alternate classification of mathematical models, integral representation of models. Population balance models: Description of flow pattern of flow pattern vessels, Age distribution functions, general population balance models, combined models.

**Course Outcome :**

After learning the course, the students will be able to:

- To apply the suitable modelling approach for given problem
- Analyze the terminology of mathematical models
- Develop a mathematical model based on transport phenomenon and population balance for chemical processes

**Texts Books :**

1. Process Plant Simulation by B. V. Babu, Oxford University Press, 2004.
2. Process Analysis and Simulation deterministic system, David M. Himmelblau, John Wiley & Sons,

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPATP4	ADVANCED PROCESS CONTROL	3:0:0	3

**Course Objective :**

- Expose the students to the advanced control methods used in industries and research
- To analyze the system to adapt a control strategy
- Analyze the functioning of different control strategy and tuning of controllers
- To introduce to the concept of advanced control strategy for process

**Course Content :**

Review of Systems: Review of first and higher order systems, closed and open loop response. Response to step, impulse and sinusoidal disturbances. Transient response. Block diagrams. Stability Analysis: Frequency response, design of control system, controller tuning and process identification. Ziegler-Nichols and Cohen-Coon tuning methods, Bode and Nyquist stability criterion. Process identification. Advanced Control Strategies: Special Control Techniques: Advanced control techniques, cascade, ratio, feed forward, adaptive control, Smith predictor, internal model control automatic tuning and gain scheduling. Multivariable Control Analysis: Introduction to state-space methods, , Control degrees of freedom analysis and analysis, Interaction, Bristol arrays, Niederlinski index - design of controllers, Tuning of multivariable controllers. Sample Data Controllers: Basic review of Z transforms, Response of discrete systems to various inputs. Open and closed loop response to step, impulse and sinusoidal inputs, closed loop response of discrete systems. Design of digital controllers. Introduction to PLC and DCS.

**Course Outcomes :**

At the end of the course, the student will be able to:

- Controller tuning
- Type of controller that can be used for specific problems in chemical industry
- Design of controllers for interacting multivariable systems
- Design of digital control systems

**Texts Books :**

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPATP5	PROCESS INTENSIFICATION	3:0:0	3

**Course Objective :**

- Understand the concept of Process Intensification
- Know the limitations of intensification of the chemical processes
- Apply the techniques of intensification to a range of chemical processes
- Develop various process equipment used for intensifying the processes
- Infer alternative solutions keeping in view point, the environmental protection, economic viability and social acceptance

**Course Content :**

Introduction of Process Intensification (PI), Process Intensifying Equipment, Process intensification toolbox, Techniques for PI application, Process Intensification through Micro Reaction Technology, Inherent Process Restrictions in Miniaturized Devices and Their Potential, Scales of Mixing, Flow Patterns in Reactors, Mixing in Stirred Tanks, Mixing in intensified equipment, Chemical Processing in High-Gravity Fields Atomizer Ultrasound Atomization, Nebulizers, High intensity inline MIXERS reactors Static mixers, Rotor stator mixers, Design Principles of static Mixers, Classification of compact heat exchangers, Plate heat exchangers, Spiral heat exchangers, Flow pattern, Heat transfer and pressure drop, Flat tube-and-fin heat exchangers, Microchannel heat exchangers, Phase-change heat transfer, Selection of heat exchanger technology, Feed/effluent heat exchangers, Integrated heat exchangers in separation processes, Design of compact heat exchanger - example, Energy based intensifications, Sono-chemistry, Basics of cavitation, Cavitation Reactors, Cavitation reactor design, Nusselt-flow model and mass transfer, The Rotating Electrolytic Cell, Microwaves, Electrostatic fields, Reactive separations, Supercritical fluids.

**Course Outcomes :**

At the end of the course, the student will be able to:

- Assess the values and limitations of process intensification, cleaner technologies and waste minimization options
- Measure and monitor the usage of raw materials and wastes generating from production and frame the strategies for reduction, reuse and recycle
- Obtain alternative solutions ensuring a more sustainable future based on environmental protection, economic viability and social acceptance
- Analyze data, observe trends and relate this to other variables
- Plan for research in new energy systems, materials and process intensification

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPATP6	BIOPROCESS ENGINEERING	3:0:0	3

**Course Objective:**

- To learn the principles of bioprocessing for traditional chemical engineering in the design and development of processes involving biocatalyst
- To study engineering principles in the development of products based on living cells or subcomponents of such cells
- To learn and develop quantitative models and approaches related to bioprocesses
- To learn mechanistic models for enzyme catalyzed reactions for large scale production of bio products

**Course Content :**

Introduction: Biotechnology and bio processing. An overview of biological basics. Basics of enzyme and microbial kinetics. Operating considerations for bioreactors: cultivation method, modifying batch and continuous reactors, immobilized cell systems, solid state fermentations. Advance Enzyme Kinetics: Models for complex enzyme kinetics, modelling of effect of pH and temperature, models for insoluble substrate, models for immobilized enzyme systems, diffusion limitations in immobilized enzyme system, electrostatic and steric effects. Bioreactors: Selection, scale-up, operation and control of bioreactors: Scale-up and its difficulties, bioreactor instrumentation and control, sterilization of process fluids. Modifications of batch and continuous reactors, chemostat with recycle, multistage chemostat, fed-batch operation, perfusion system, active and passive immobilization of cells, diffusional limitations in the immobilized system, solid state fermenters. Homogeneous and heterogeneous reactions in bioprocesses: Reaction thermodynamics, growth kinetics with Plasmid instability, The Thiele Modulus and effectiveness factor, diffusion and reaction in waste treatment lagoon. Reactors and choice of reactors. Recovery and purification of products: Strategies to recover and purify products, separation of insoluble products, cell disruption, separation of soluble products

**Course Outcomes :**

At the end of the course, the student will be able to:

- Understand the different cells and their use in biochemical processes.
- Understand the role of enzymes in kinetic analysis of biochemical reaction.
- Analyze bioreactors, upstream and downstream processes in production of bio-products
- Demonstrate the fermentation process and its products for the latest industrial revolution

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPATC1	RESEARCH METHODOLOGY AND IPR	2:0:0	2

**Course Objective:**

- To familiarize participants with basic of research and the research process
- To enable the participants with basic understanding of types of data and data collection methods
- To enable the participants in conducting research work and formulating research synopsis and report
- To familiarize participants with IPR
- To impart knowledge for enabling students to develop data analytics skills and meaningful interpretation to the data sets so as to solve the research problem

**Course Content:**

Introduction and Design of research: Meaning, objectives and significance of research, types and parameters of research, research process, identification and definition of the research problem, definition of construct and variables, pure and applied research design, exploratory and descriptive design methodology, qualitative vs. quantitative research methodology, field studies, field experiments vs. laboratory experiments, research design in social and physical sciences. Data and Methods of Data Collection: Survey, assessment and analysis: data collection, primary and secondary sources of data, Collection of primary data through questionnaire and schedules. Collection of secondary data, processing and analysis of data. Sample survey, simple random sampling, stratified random sampling, systematic sampling, cluster sampling, area sampling and multistage sampling. Pilot survey, scaling techniques, validity & reliability. Data Analysis: Procedure for testing of hypothesis, the null hypothesis, determining levels of significance, type i and ii errors, grouped data distribution, measures of central tendency, measures of spread/dispersion, normal distribution, analysis of variance: one way, two way, chi square test and its application, students 'T' distribution, non-parametric statistical techniques, binomial test. Correlation and regression analysis - discriminate analysis - factor analysis - cluster analysis, measures of relationship Research report preparation and presentation: Review of literature: historical survey and its necessity, layout of research plan, meaning, techniques and precautions of interpretation, types of report: technical report, popular report, report writing - layout of research report, mechanics of writing a research report. Writing bibliography and references. Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.

**Course Outcomes :**

At the end of the course, the student will be able to:

- Understand research problem formulation
- Analyze research related information

SUBJECT CODE	SUBJECT NAME	L:T:P	Credit
CHPBTT1	ADVANCED TRANSPORT PHENOMENA	3:0:0	3

**Course Objective :**

- To familiarize the student with basic concepts of transport phenomena and brief review of mathematics
- To enable students to understand the equations of change for isothermal flow and for non-isothermal flow
- To introduce them details of equations of change for multi component systems
- To give them insight into properties of two-dimensional flows and aspects of dimensional analysis

**Course Content :**

Review of vector and tensor operations, vector calculus, curvilinear coordinate systems. Review of Shell Balance: Equations of Continuity, Motion and Mechanical Energy, Time Derivatives, Use of the Equations to Solve Flow Problems, Dimensional Analysis of the Equations of Change. Velocity Distributions with more than one Independent Variable: Time Dependent Flow of Newtonian Fluids Laminar and Turbulent Flows, Equations of Change for Non-Isothermal Systems: The Energy Equation, Forced and Free Convection, Dimensional Analysis of the Equations of Change for Non-Isothermal Systems. Heat Conduction with an Electrical Heat Source, Viscous Heat Source. Unsteady Heat Conduction in Solids, Temperature Distributions in Turbulent Flow. Empirical Expressions for the Turbulent Heat Flux Temperature Distribution for Turbulent Flow in Tubes. Macroscopic Balances for Non-Isothermal Systems: Steady State Problems with Flat Velocity Profiles, Concentration Distributions in Solids, Laminar Flow: Shell Mass Balances Boundary Conditions, Diffusion through a Stagnant Gas Film, Diffusion with a Heterogeneous Chemical Reaction. Concentration Distributions with more than One Independent Variable: Time-Dependent Diffusion, Steady-State Transport in Binary Boundary Layers, Concentration Distributions in Turbulent Flow, Semi-Empirical Expressions for the Turbulent Mass Flux, Enhancement of Mass Transfer by a First-Order Reaction in Turbulent Flow. Interphase Transport in Multi-Component Systems: Transfer Coefficients in Single and Two phases, Mass Transfer and Chemical Reactions. Macroscopic Balances for Multi-Component Systems: Macroscopic Mass and Momentum Balance and its application to steady state problems.

**Course Outcome :**

At the end of the course, the student will be able to:

1. Understand the mechanism of momentum, heat and mass transport for steady and unsteady flow
2. Perform momentum, energy and mass balances for a given system at macroscopic and microscopic scale

*Geeta Chandrika*

*[Signature]*

*[Signature]*  
29/10/21

*[Signature]*  
29/11/21

3. Solve the governing equations to obtain velocity, temperature and concentration profiles
4. Model the momentum, heat and mass transport under turbulent conditions. Develop analogies among momentum, energy and mass transport

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPBTT2	CHEMICAL REACTOR DESIGN	3:0:0	3

**Course Objective:**

- This course introduces students to the application of kinetics and reaction engineering in chemical engineering processes.
- Understand the concepts such as standard states, chemical reaction rates, reaction mechanism mass balances and design equations for ideal reactors as well as non-ideal reactors

**Course Content :**

Review of Design of ideal isothermal homogeneous reactor for single and multiple reactions, RTD of Ideal reactor, interpretation of RTD data, Flow models for non-ideal reactors, dispersion model, N tanks in series, multi parameter model, diagnosing the ills of reactor , influence of RTD and micro mixing on conversion. Adiabatic and non adiabatic operations in batch and flow reactors, optimal temperature in progression. Hot spot in tubular reactor auto thermal operation and steady state multiple steady state introduction to bifurcation theory Catalytic reactors, effectiveness factor, selectivity, catalyst deactivation, Design of heterogeneous catalytic reactors.

**Course Outcomes :**

At the end of the course, the student will be able to:

1. Understand the Adiabatic and non-adiabatic operations in batch and flow reactors,
2. Understand the reactor design involving Catalytic reactors, effectiveness factor, selectivity, catalyst deactivation,
3. Understand the design of heterogeneous catalytic reactors.

**Texts Books :**

- Carberry James J, Chemical and Catalytic Reaction Engineering, McGraw Hill
- Smith J.M., Chemical Engineering Kinetics, Mcgraw Hill

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPBTP1	COMPUTATIONAL FLUID DYNAMICS	3:0:0	3

**Course Objective :**

- To provide an introduction to the scientific principles and practical engineering applications of computational fluid dynamics
- To give exposure to the commercial software ANSYS Fluent

**Course Content :**

Computational approach to Fluid Dynamics and its comparison with experimental and analytical methods, Basics of PDE: Elliptic, Parabolic and Hyperbolic Equations, Review of Navier-Stokes Equation and simplified forms, grid generation, structured and unstructured grids, choice of suitable grid, grid transformation of equations, some modern developments in grid generation for solving engineering problems, CFD essentials, Finite difference method (FDM), finite volume method (FVM) and finite element method (FEM): Discretization of ODE and PDE, , Explicit and Implicit scheme to solve heat and fluid flow problems, Application of 1st order and 2nd order Upwind Scheme, Application of SIMPLE, SIMPLER algorithm to solve fluid flow problems, Simulation of CFD problems using Fluent.

**Course Outcome :**

After learning the course, the students will be able to:

1. To discretize the momentum, mass and energy transport equations by finite volume technique.
2. To understand the subject of Computational Fluid Dynamics and know how to use it as tool to solve the Heat Transfer and Fluid Mechanics related Industrial Problems.
3. To solve some problems with the help of the ANSYS Fluent software.

**Texts Books :**

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPBTP2	FUEL CELL TECHNOLOGY	3:0:0	3

**Course Objective:**

- Demonstrate a thorough understanding of the fuel cell power plant's and its components' performance characteristics
- Describe the performance and design characteristics of various fuel cells, as well as operational issues
- Discuss the design philosophy and challenges that must be overcome in order for this power plant to be economically viable
- Thermodynamics and electrochemistry will be the focus of the design and analysis

**Course Content :**

Low and high temperature fuel cells are discussed in this overview of hydrogen energy and fuel cells. Polymer electrolyte fuel cells, Alkaline fuel cells, Phosphoric fuel cells, Molten carbonate fuel cells, Solid oxide fuel cells, Microbial fuel cells, Fuel cell systems, and Sample calculations are all examples of fuel cell performance. Thermodynamics of fuel cells: heat, work potentials, reversible voltage prediction, and fuel cell efficiency. Electrocatalysts-design, activation kinetics, overvoltages, Tafel equation, charge transfer reaction, exchange currents, fuel cell reaction kinetics-electrode kinetics, overvoltages, Tafel equation, charge transfer reaction, exchange currents, electrocatalysts-design, activation kinetics Charge and mass transport in a fuel cell-flow field, transport in the electrode, and transport in the electrolyte Characterization of fuel cells:- characterization techniques in-situ and ex-situ, I-V curve, frequency response analyses Materials Science and Engineering, Process Safety and Process Design

**Course Outcomes :**

At the end of the course, the student will be able to:

1. Apply know-how of thermodynamics, electrochemistry, heat transfer, and fluid mechanics principles to design and analysis of this emerging technology
2. Have thorough understanding of performance behaviour, operational issues and challenges for all major types of fuel cells
3. Identify, formulate, and solve problems related to fuel cell technology keeping in mind economic viability
4. Use the techniques, skills, and modern engineering tools necessary for design and analysis of innovative fuel cell systems
5. Understand the impact of this technology in a global and societal context

**Texts Books :**

- Larminie J. and Dicks A., Fuel Cell Systems Explained, , John Wiley & Sons Inc.
- Barbir Frano, PEM Fuel Cells Theory and Practice, Elsevier Academic Press
- Hoogers G., Fuel Cell Technology Handbook, SAE International

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPBTP3	PROCESS PLANT DESIGN & FLOW SHEETING	3:0:0	3

**Course Objective :**

- Understanding of the scope, principles, norms, accountabilities and bounds of contemporary engineering practice in the specific discipline
- Application of established engineering methods to complex engineering problem solving
- Application of systematic engineering synthesis and design processes

**Course Content :**

General design considerations, Layout of plant items, Flow sheets and PI diagrams, Economic aspects and Optimum design, Degrees of freedom analysis in interconnected systems, Network analysis, PERT/CPM, Direct and Indirect costs, Optimum scheduling and crashing of activities, Hierarchy of chemical process design, Synthesis of reaction-separation systems, Energy targets. Heat integration of reactors, distillation columns, evaporators and driers, Heat and mass exchange networks and network design, Algorithmic flow sheet generation using P-graph theory, Sequencing of operating units, Feasibility and optimization of flow sheet using various algorithms, Solution Structure Generation (SSG), Maximal Structure Generation (MSG), Simplex, Branch-and-bound etc., Analysis of Cost estimation, Estimation of capital investment and total product costs, Interest, Time value of money, Taxes and Fixed charges, Salvage value, Methods of calculating depreciation, Profitability, Alternative investments and replacements, Optimum Design and Design Strategy, Break-even analysis, Optimum production rates in plant operation.

**Course Outcomes :**

At the end of the course, the student will be able to:

1. Analyze, synthesize and design processes for manufacturing products commercially
2. Integrate and apply techniques and knowledge acquired in other courses such as thermodynamics, heat and mass transfer, fluid mechanics, instrumentation and control to design heat exchangers, plate and packed columns and engineering flow diagrams
3. Use commercial flow sheeting software to simulate processes and design process equipment
4. Recognize economic, construction, safety, operability and other design constraints
5. Estimate fixed and working capitals and operating costs for process plants

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPBTP4	DESIGN & DEVELOPMENT OF CATALYST	3:0:0	3

**Course Objective:**

- To give the students insight into advances in catalytic reaction engineering
- To understand the mechanisms involved in catalytic reactions
- To study the catalyst characterization techniques
- To study the advanced industrial applications in catalysis
- To understand the principles behind catalyst deactivation and study their models

**Course Contents :**

Structure of solid surfaces; Chemisorption and Physisorption; Thermodynamics and kinetics of surface processes; Principles of heterogeneous catalysis; Preparation, characterization and classification; Structure and activity; Lattice imperfection; Geometric and electronic factors Preparation and characterization of catalysts. Kinetics of heterogeneous reactions. Physical, Chemical and mathematical description of catalyst deactivation; Deactivation by fouling, poisoning and sintering. Deactivation and regeneration of catalyst pellets. Deactivation and regeneration of fixed beds. Dynamics of polyfunctional catalysts. Electro catalysis and photo catalysis. Mechanism and kinetics of some typical heterogeneous catalytic reactions. Applications in fertilizer, petroleum, petrochemical industries and pollution control.

**Course Outcomes :**

At the end of the course, the student will be able to:

1. To understand the concepts of homogenous and heterogeneous catalysis, with specific examples.
2. To study reaction mechanisms and kinetics of homogenous and heterogeneous catalytic reactions.
3. To familiarize with the characterization of catalysts
4. To understand the application and mechanisms of several types of catalysts in chemical industry

**Texts Books :**

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPBTP5	INDUSTRIAL POLLUTION CONTROL	3:0:0	3

**Course Objective :**

- To understand the importance of industrial pollution and its abatement
- To study the underlying principles of industrial pollution control
- To acquaint the students with case studies
- Student should be able to design complete treatment system

**Course Content :**

Air pollution Sources and Effects, Air pollution laws and standards; Air pollution sampling and measurement from point, non-point, line and area sources, analysis of air pollutants; Air pollution control methods and equipment, Design details of Particulate emission control equipments like Gravitational settling Chamber, Cyclone Separator, Fabric Filter, Electrostatic Precipitator, Wet scrubber; Case studies of a few industrial pollution control system. Sources, effects and laws of water pollution; BOD, COD; Waste water treatment, Design details of Primary Treatment methods like Pretreatment, Sedimentation, Floatation, Design aspects of Secondary Treatment methods like Activated Sludge Process, Trickling Filter. Design aspects of Advanced waste water treatment including Ion Exchanger, Reverse Osmosis, Electrodialysis, Advanced Biological Systems. Solid Waste Management, design calculation of disposal methods, Incineration, Hazardous Waste Management strategy and treatment methods, landfill closure and underground disposal.

**Course Outcome :**

After learning the course, the students will be able to:

1. Recognize the causes and effects of environmental pollution
2. Analyze the mechanism of proliferation of pollution
3. Develop methods for pollution abatement and waste minimization
4. Design treatment methods for gas, liquid and solid wastes

**Texts Books :**

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPBTP6	SAFETY HAZARDS & RISK ANALYSIS	3:0:0	3

**Course Objective:**

- This course enables student to learn the basic principles of safety
- The course deals with sufficient knowledge on need and principles of risk assessment methodologies and tools
- It provides knowledge on cause - effect relationships of accidents at work places, hazard identification and control aspects, fire prevention and control
- Work place health related issues are also covered

**Course Content :**

Safety legislations: Safety programmers, Public perceptions, Engineering ethics, Government police on safety hazard identification, preliminary hazard and operability (HAZOP) analysis, event tree, fault tree analysis, Toxic releases, to phase phenomenon, emission and dispersion models, estimation and prevention, fire and explosions, chemistry of fire, fire triangle, fire and explosion index (FEI), estimating, heat effects, vapor cloud explosion (VCE),boiling liquid expanding vapor explosions(BLEVE) and prevention, industrial hygiene, health hazards, evaluations of work's exposure to toxicants, control methods, Hazard management safety system, relief systems, risk management routines, emergency plans, and disaster control ergonomics Case histories of some major accidents, Nuclear radiation hazards and safety from these.

**Course Outcome :**

At the end of the course, the student will be able to:

1. Define terminologies, Explain risk assessment models and tools
2. Perform the process of risk assessment and illustrate exposure assessment models
3. List hazard identification methods
4. Review of case studies with respect to risk identification, assessment and emergency preparedness

**Texts Books :**

- Saha S. N., Fuel Combustion Energy Technology, Dhanpat Rai Pub. (P) Ltd, New Delhi, 1st Edition 2003
- G. L. Wells, Safety in Process Plant Design

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
MSPBT01	BUSINESS ANALYTICS	3:0:0	3

**Course Objective :**

- To understand the data analytics
- To develop the ability of critical thinking
- To develop technical skill in predicative modeling

**Course Content :**

Business analytics: Overview of Business analytics, Scope of Business analytics, Business Analytics Process, Relationship of Business Analytics Process and organisation, competitive advantages of Business Analytics. Statistical Tools: Statistical Notation, Descriptive Statistical methods, Review of probability distribution and data modelling, sampling and estimation methods overview. Trendiness and Regression Analysis: Modelling Relationships and Trends in Data, simple Linear Regression. Important Resources, Business Analytics Personnel, Data and models for Business analytics, problem solving, Visualizing and Exploring Data, Business Analytics Technology. Organization Structures of Business analytics, Team management, Management Issues, Designing Information Policy, Outsourcing, Ensuring Data Quality, Measuring contribution of Business analytics, Managing Changes. Descriptive Analytics, predictive analytics, predicative Modelling, Predictive analytics analysis, Data Mining, Data Mining Methodologies, Prescriptive analytics and its step in the business analytics Process, Prescriptive Modelling, nonlinear Optimization. Forecasting Techniques: Qualitative and Judgmental Forecasting, Statistical Forecasting Models, Forecasting Models for Stationary Time Series, Forecasting Models for Time Series with a Linear Trend, Forecasting Time Series with Seasonality, Regression Forecasting with Casual Variables, Selecting Appropriate Forecasting Models. Monte Carlo Simulation and Risk Analysis: Monte Carle Simulation Using Analytic Solver Platform, New-Product Development Model, Newsvendor Model, Overbooking Model, Cash Budget Model. Decision Analysis: Formulating Decision Problems, Decision Strategies with the without Outcome Probabilities, Decision Trees, the Value of Information, Utility and Decision Making. Recent Trends in Embedded and collaborative business intelligence, Visual data recovery, Data Storytelling and Data journalism.

**Course Outcome :**

At the end of the course, students will be able to :

1. Students will demonstrate knowledge of data analytics
2. Students will demonstrate the ability of think critically in making decisions based on data and deep analytics.
3. Students will demonstrate the ability to use technical skills in predicative and prescriptive modeling to support business decision-making.

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
IPPBTO2	INDUSTRIAL SAFETY	3:0:0	3

**Course Objective :**

- Knowledge of safety measures and Engineering maintenance
- Knowledge of corrosion and their prevention

**Course Content :**

Industrial safety: Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods. Fundamentals of maintenance engineering: Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment. Wear and Corrosion and their prevention: Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods. Fault tracing: Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like, I. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes. Periodic and preventive maintenance: Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: I. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance

**Course Outcome :**

At the end of the course, students will be able to :

1. Apply the knowledge of Safety Measures
2. Plan for Engineering maintenance
3. Determine the wear & Corrosion and apply methods for their prevention

SUBJECT CODE	SUBJECT NAME	L:T:P	Credit
IPPBTO3	OPERATIONS RESEARCH	3:0:0	3

**Course Content:**

- Optimization Techniques, Model Formulation, models, General L.R Formulation, Simplex Techniques, Sensitivity Analysis, Inventory Control Models
- Formulation of a LPP - Graphical solution revised simplex method - duality theory - dual simplex method - sensitivity analysis - parametric programming
- Nonlinear programming problem - Kuhn-Tucker conditions min cost flow problem - max flow problem - CPM/PERT
- Scheduling and sequencing - single server and multiple server models deterministic inventory models - Probabilistic inventory control models Geometric Programming.
- Competitive Models, Single and Multi-channel Problems, Sequencing Models, Dynamic Programming, Flow in Networks, Elementary Graph Theory, Game Theory Simulation

**Course Outcomes:**

At the end of the course, students will be able to

- 1 Students should able to apply the dynamic programming to solve problems of discreet and continuous variables.
- 2 Students should able to apply the concept of non-linear programming
- 3 Students should able to carry out sensitivity analysis
- 4 Student should able to model the real world problem and simulate it.

SUBJECT CODE	SUBJECT NAME	L:T:P	Credit
CEPBT04	COST MANAGEMENT OF ENGINEERING PROJECTS	3:0:0	3

**Course Content::**

- Introduction and Overview of the Strategic Cost Management Process
- Cost concepts in decision-making; relevant cost, Differential cost, Incremental cost and Opportunity cost. Objectives of a Costing System; Inventory valuation; Creation of a Database for operational control; Provision of data for Decision-Making.
- Project: meaning, Different types, why to manage, cost overruns centres, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and non-technical activities. Detailed Engineering activities. Pre project execution main clearances and documents Project team: Role of each member. Importance Project site: Data required with significance. Project contracts. Types and contents. Project execution Project cost control. Bar charts and Network diagram. Project commissioning: mechanical and process
- Cost Behavior and Profit Planning Marginal Costing; Distinction between Marginal Costing and Absorption Costing; Break-even Analysis, Cost-Volume-Profit Analysis. Various decision-making problems. Standard Costing and Variance Analysis. Pricing strategies: Pareto Analysis. Target costing, Life Cycle Costing. Costing of service sector. Just-in-time approach, Material Requirement Planning, Enterprise Resource Planning, Total Quality Management and Theory of constraints. Activity-Based Cost Management, Bench Marking; Balanced Score Card and Value-Chain Analysis. Budgetary Control; Flexible Budgets; Performance budgets; Zero-based budgets. Measurement of Divisional profitability pricing decisions including transfer pricing.
- Quantitative techniques for cost management, Linear Programming, PERT/CPM, Transportation problems, Assignment problems, Simulation, Learning Curve Theory.

**Course Outcomes :** At the end of the course, students will be able to

- 1 Discuss the cost concepts in the cost management process.
- 2 Able to handle the projects by the application of project cost control methods.
- 3 Determine all types of costing and carryout the analysis of pricings for profitability.
- 4 Application of PERT/CPM for cost management.

SUBJECT CODE	SUBJECT NAME	L:T:P	Credit
MEPBTO5	COMPOSITE MATERIALS	3:0:0	3

**Course Contents:**

- **INTRODUCTION:** Definition – Classification and characteristics of Composite materials. Advantages and application of composites. Functional requirements of reinforcement and matrix. Effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance.
- **REINFORCEMENTS:** Preparation-layup, curing, properties and applications of glass fibers, carbon fibers, Kevlar fibers and Boron fibers. Properties and applications of whiskers, particle reinforcements. Mechanical Behavior of composites: Rule of mixtures, Inverse rule of mixtures. Isostrain and Isostress conditions.
- **Manufacturing of Metal Matrix Composites:** Casting – Solid State diffusion technique, Cladding – Hot isostatic pressing. Properties and applications. **Manufacturing of Ceramic Matrix Composites:** Liquid Metal Infiltration – Liquid phase sintering. **Manufacturing of Carbon – Carbon composites:** Knitting, Braiding, Weaving. Properties and applications.
- **Manufacturing of Polymer Matrix Composites:** Preparation of Moulding compounds and prepregs – hand layup method – Autoclave method – Filament winding method – Compression moulding – Reaction injection moulding. Properties and applications.
- **Strength:** Laminar Failure Criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hygrothermal failure. Laminate first ply failure-insight strength; Laminate strength-ply discount truncated maximum strain criterion; strength design using caplet plots; stress concentrations

**Course Outcomes:**

At the end of the course, students will be able to

- 1 Explain and also implement the composite materials for the required performance based on the characteristics.
- 2 Adopt the composite materials as reinforcements.
- 3 Implement the methods of manufacturing of metal matrix composites
- 4 Adopt the methods of manufacturing of polymer matrix composites
- 5 Evaluate the strength of laminates.

SUBJECT CODE	SUBJECT NAME	L:T:P	Credit
CHPBTO6	WASTE TO ENERGY	3:0:0	3

**Course Contents:**

Introduction to Energy from Waste: Classification of waste as fuel - Agro based, Forest residue, Industrial waste. - MSW - Conversion devices - Incinerators, gasifiers, digestors Biomass Pyrolysis: Pyrolysis - Types, slow, fast - Manufacture of charcoal - Methods - Yields and application - Manufacture of pyrolytic oils and gases, yields and applications. Biomass Gasification: Gasifiers - Fixed bed system - Downdraft and updraft gasifiers - Fluidized bed gasifiers - Design, construction and operation - Gasifier burner arrangement for thermal heating - Gasifier engine arrangement and electrical power - Equilibrium and kinetic consideration in gasifier operation. Biomass Combustion: Biomass stoves - Improved chullahs, types, some exotic designs, fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation - Operation of all the above biomass combustors. Biogas: Properties of biogas (Calorific value and composition) - Biogas plant technology and status - Bio energy system - Design and constructional features - Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion - Direct combustion - biomass gasification - pyrolysis and liquefaction - biochemical conversion - anaerobic digestion - Types of biogas Plants - Applications - Alcohol production from biomass, Bio diesel production - Urban waste to energy conversion - Biomass energy programme in India.

**Course Outcomes:**

At the end of the course, students will be able to

- 1 Classify the waste for fuel and identify the devices for conversion of waste to energy.
- 2 Implement the Biomass Pyrolysis
- 3 Evaluate the methods of Biomass Gasification and implement their applications.
- 4 To design, construct and operation the Biomass Combustion devices.
- 5 Classify biomass, apply the bio energy systems design and construction.

SUBJECT CODE	SUBJECT NAME	L:T:P	Credit
ECPBT07	INTERNET OF THINGS (IoT)	3:0:0	3

**Course Contents:**

- Review of computer communication concepts (OSI layers, components, packet communication, Networks, TCP-IP, subnetting, IPV4 addressing and challenges). IPV6 addressing. IoT architecture reference layer. Characteristics IoT sensor nodes, Edge computer, cloud and peripheral cloud, single board computers, open source hardware, Examples of IoT infrastructure.
- IoT and M2M, Software defined networks, network function virtualization, difference between SDN and NFV for IoT, Basics of IoT System Management with NETCOZF, YANG- NETCONF, YANG, SNMP NETOPEER.
- IOT protocols and Communication Technologies, MQTT, UDP, MQTT brokers, publish subscribe modes, HTTP, COAP, XMPP and gateway protocols, IoT Communication Pattern, IoT Protocol Architecture, Selection of Wireless technologies ( 6LoWPAN, Zigbee, WIFI, BT, BLE, SIG, NFC, LORA, Lifi, Widi).
- Data and Analytics for IoT, An Introduction to Data Analytics for IoT, Machine Learning, Big Data Analytics Tools and Technology, Edge Streaming Analytics, Network Analytics, Securing IoT, A Brief History of IOT Security, Common Challenges in IOT Security, How IT and OT Security Practices and Systems Vary, Formal Risk Analysis Structures: OCTAVE and FAIR, The Phased Application of Security in an Operational Environment.
- IoT Physical Devices and Endpoints: Introduction to Arduino and Raspberry Pi- Installation, Interfaces (serial, SPI, I2C), Programming – Python program with Raspberry PI with focus on interfacing external gadgets, controlling output, reading input from pins.
- IoT Physical Servers and Cloud Offerings: Introduction to Cloud Storage models and communication APIs WebServer: Web server for IoT, Cloud for IoT, Python web application framework Designing a RESTful web API.
- IoT application and its Variants: Case studies: IoT for smart cities, smart grid, health care, agriculture, smart meters. M2M, Web of things, Cellular IoT, Industrial IoT, Industry 4.0, IoT standards.

**Course Outcomes:**

At the end of the course, students will be able to

- 1 Understand the concepts of Internet of Things.
- 2 Analyze basic protocols in wireless sensor network.

ELPBTX1	ENGLISH FOR RESEARCH PAPER WRITING	2:0:0	2

**Course Contents:**

- Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness
- Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticizing, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts. Introduction
- Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check
- Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Ruseful phrases, how to ensure paper is as good as it could possibly be the first- time submissionreview of the Literature.
- skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions
- useful phrases, how to ensure paper is as good as it could possibly be the first-time submission

**Course Outcomes:**

At the end of the course, students will be able to

- 1 Understand that how to improv your writing skills and level of readability.
- 2 Learn about what to write in each section
- 3 Understand the skills needed when writing a Title
- 4 Ensure the good quality of paper at very first-time submission

PEPBTX2	STRESS MANAGEMENT BY YOGA	2:0:0	2

**Course Contents:**

- Definitions of Eight parts of yog. ( Ashtanga ).
- Yam and Niyam, Do's and Don't's in life, i) Ahinsa, satya, astheya, bramhacharya and aparigraha, ii) Shaucha, santosh, tapa, swadhyay, ishwarpranidhan.
- Asan and Pranayam, i) Various yog poses and their benefits for mind & body, ii) Regularization of breathing techniques and its effects-Types of pranayam.

**Course Outcomes:**

At the end of the course, students will be able to

- 1 Develop healthy mind in a healthy body thus improving social health also.
- 2 Improve efficiency

CEPBTX3	DISASTER MANAGEMENT	2:0:0	2

**Course Contents:**

- Introduction Disaster: Definition, Factors and Significance; Difference between Hazard and Disaster; Natural and Manmade Disasters: Difference, Nature, Types and Magnitude.
- Repercussions of Disasters and Hazards: Economic Damage, Loss of Human and Animal Life, Destruction of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts and Famines, Landslides and Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks and Spills, Outbreaks of Disease and Epidemics, War and Conflicts.
- Disaster Prone Areas in India, Study of Seismic Zones; Areas Prone To Floods and Droughts, Landslides and Avalanches; Areas Prone to Cyclonic and Coastal Hazards with special reference to Tsunami; Post-Disaster Diseases and Epidemics.
- Disaster Preparedness and Management: Preparedness: Monitoring of Phenomena Triggering a Disaster or Hazard; Evaluation of Risk: Application of Remote Sensing, Data from Meteorological and other agencies, Media Reports: Governmental and Community Preparedness.
- Risk Assessment: Disaster Risk: Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. Techniques of Risk Assessment, Global Co-Operation in Risk Assessment and Warning, People's Participation in Risk Assessment. Strategies for Survival.
- Disaster Mitigation: Meaning, Concept and Strategies of Disaster Mitigation, Emerging Trends in Mitigation. Structural Mitigation and Non-Structural Mitigation, Programs of Disaster Mitigation in India.

**Course Outcomes :**

At the end of the course, students will be able to

- 1 Learn to demonstrate a critical understanding of key concepts in disaster risk reduction and humanitarian response.
- 2 Critically evaluate disaster risk reduction and humanitarian response policy and practice from multiple perspectives
- 3 Develop an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations
- 4 Critically understand the strengths and weaknesses of disaster management approaches, planning and programming in different countries, particularly their home country or the countries they work in

LAPBTX4	CONSTITUTION OF INDIA	2:0:0	2

**Course Contents:**

- History of Making of the Indian Constitution: History Drafting Committee, (Composition & Working).
- Philosophy of the Indian Constitution: Preamble, Salient Features
- Contours of Constitutional Rights & Duties: Fundamental Rights, Right to Equality, Right to Freedom, Right against Exploitation, Right to Freedom of Religion, Cultural and Educational Rights, Right to Constitutional Remedies, Directive Principles of State Policy, Fundamental Duties.
- Organs of Governance: Parliament, Composition, Qualifications and Disqualifications, Powers and Functions, Executive, President, Governor, Council of Ministers, Judiciary, appointment and Transfer of Judges, Qualifications, Powers and Functions.
- Local Administration: District's Administration head: Role and Importance, Municipalities: Introduction, Mayor and role of Elected Representative, CEO of Municipal Corporation. Pachayati raj: Introduction, PRI: ZilaPachayat. Elected officials and their roles, CEO ZilaPachayat: Position and role. Block level: Organizational Hierarchy (Different departments), Village level: Role of Elected and Appointed officials, Importance of grass root democracy.
- Election Commission: Election Commission: Role and Functioning, Chief Election Commissioner and Election Commissioners, State Election Commission: Role and Functioning, Institute and Bodies for the welfare of SC/ST/OBC and women.

**Course Outcomes:**

At the end of the course, students will be able to

- 1 Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.
- 2 Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India.
- 3 Discuss the circumstances surrounding the foundation of the Congress Socialist Party [CSP] under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution.
- 4 Discuss the passage of the Hindu Code Bill of 1956.
