Minutes of Meeting of Online Board of Studies

Anonlinemeeting of board of studies (BOS) of the department of Industrial &Production Engineering was held on 23.07.2021 at 11:00AM. The following members werepresent-

1. Prof. G.K.Agrawal(External Member), Professor, Govt. Engineering College, Bilaspur(C.G.)

Mr. Dalbir Singh Rekhi(External Member),

Associate Vice President, Jindal Steel & Power Ltd., Angul (OD)

3. Prof. M.K.Singh (Memberof B.O.S.), Professor, Deptt.of I.P.E., G.G.V., Bilaspur (C.G.)

4. Prof. S.C. Shrivastava

Professor, & H.O.DDeptt. of I.P.E., G.G.V., Bilaspur (C.G.)

5.Mrs. Disha Dewanagn (Member of B.O.S.)

Assistant Professor, Deptt. of I.P.E., G.G.V., Bilaspur (C.G.)

6. Mr. C.P. Dewangan(Member of B.O.S.)

Associate Professor, Deptt. of I.P.E., G.G.V., Bilaspur (C.G.)

7. Mrs. Arpita Roy Choudhary

Assistant Professor, Deptt. of I.P.E., G.G.V., Bilaspur (C.G.)

8. Dr. Atul Kumar Sahu

Assistant Professor, Deptt. of I.P.E., G.G.V., Bilaspur (C.Go

Mr. Ganesh Prasad Shukla.

Assistant Professor, Deptt. of I.P.E., G.G.V., Bilaspur (C.G.)

Mr. Leeladhar Rajput

Assistant Professor, Deptt. of I.P.E., G.G.V., Bilaspur JC.G.

11. Mr.Nitin Kumar Sahu

Assistant Professor, Deptt. of I.P.E., G.G.V., Bilaspur (C.G.)

12. Mr. Kailash Borkar

Assistant Professor, Deptt. of I.P.E., G.G.V., Bilaspur (C.G.)

Mr. Anurag Singh

Assistant Professor, Deptt. of I.P.E., G.G.V., Bilaspur (C.G.)

Mr. Kawal Lal Kurrey

In the meeting, new Choice Based Credit System (CBCS)scheme, syllabusof B.Tech.VII, VIIISemester (Industrial &Production Engineering) was discussed in detail. All the suggestions of the members were incorporated and recommended for approval.

The new CBCS scheme and syllabus of B.Tech(Industrial & Production Engineering) VII, VIIISemester have been accepted by the B.O.S. (I.P.E.) were attached herewith and recommended for approval from the competent authority.

The B.O.S. Online meeting was concluded with vote of thanks by Head of the Department.

Course Name & Semester	Course No.	SUBJECT	L	т	p	INTERNAL ASSESSMENT		ESE	SUB-	CREDITS
					1000	CT-I	CT-II		TOTAL	P. L
B. Tech. VII Sem.	IP07TPC14	Computer Aided Design & Manufacturing	3	1		15	15	70	100	4

The objective of this course is to:

- · To introduce the student to be familiar with CAD/CAM terminology and its capabilities.
- To recognize geometric and graphical elements of engineering design problems.
- To study Basic features of CAM so as to be capable of accepting professional responsibilities and to understand the associativity between design and manufacturing.
- Integrate the CAD system and the CAM system by using the CAD system for modelling design information and converting the CAD model into a CAM model for modelling the manufacturing information.

COURSE OUTCOMES:

At the end of the course the students will be able to:

- Understand the various CAD/CAM and CNC processes.
- Recognize various types of Curves, surface and Solid and their application as used in geometric modelling.
- Analyse the NC programs to generate and verify the tool path for milling and drilling manufacturing processes.
- Appreciate the concept of parametric modelling which is the mainstay of most of the 3D modelling system.

COURSE CONTENT:

MODULE-I

Basics of CAD: Basics fundamental of computer graphics, principle of computer graphics, product life cycle, concept of computer aided design (CAD) and architecture, hardware and software, color management, raster graphics, graphic primitives, lines, and circle drawing algorithms, software documentations, CAD standards GKS, open GL, data exchange standards: IGES, STEP, CALS etc., communication standards, standards for exchange images.

MODULE - II

Geometric modeling of curves, surface and solid: Basics representation of curves, parametric and non- parametric curves, mathematical representation of curves, Hermite curves, Bezier curves, Bspline curves and rational curves, basic of surface, techniques of surface modeling, plane surface,

(Robert Magni

CSALO N

a x

rule surface, surface of revolution and sweep, coons and bi-cubic patches, concept of Bezier and Bspline surfaces, basic concept of solid modeling technique, CSG and B-rep method for solid generation.

MODULE - III

Geometric transformation: Computer Aided Design (CAD) methodology, coordinate systems, theory and applications, 2D and 3D geometric transformation, homogeneous transformation, concatenation, assembly modeling, interferences of positions and orientation, tolerance analysis, mass property calculations, visual realism- hidden line-surface-solid removal algorithms, shading, coloring, computer animation, concurrent engineering.

MODULE - IV

Basics of CAM: Basic concept of numerical control (NC) System, NC coordinate system, NC motion control, application of NC, concepts of computer numeric control (CNC) system, problems with conventional, NC, CNC.

Part Programming: Introduction to NC part programming, manual part programming, computer assisted part programming, automatically programming tool (APT) language, statements and code of APT, programming methods, advantages of CAD/CAM programming.

MODULE - V

Advance manufacturing system: Concept of distributed numeric control (DNC) system, and its advantages and disadvantages of over NC and CNC, Concept of computer integrated method (CIM), Flexible manufacturing system (FMS), benefits and applications of CIM and FMS, group technology (GT), parts classification and coding systems, benefits and applications of GT, automated storage and retrieval system (AS/RS), automated guided vehicle (AGV).

Course Name & Co Semester	Course No.	CUDIFICA	PERIOD			EVA	HEME			
	Course 140.	SUBJECT	L	Т	р		INTERNAL ASSESSMENT		SUB-	CREDITS
			1 3	260	Tien	CT-1	CT-II	ESE	TOTAL	
B. Tech. VII Sem.	IP07TPC15	Production Planning and Control	3			15	15	70	100	3

The objectives of this course are:

- To originate engineering skills to identify, formulate, and solve industrial process problems.
- To demonstrate the concept of organization, production systems and cost analysis.
- To understand the problems and opportunities faced by the operations manager in manufacturing and service organizations.
- To develop an ability to apply PPC concepts in a various areas like marketing, accounting, finance, engineering, personnel management, logistics, etc.
- To integrate operations concepts with other functional areas of business and to compile several important contemporary topics relevant to business managers under functional disciplines, including quality management, production concepts, and sustainability issues.
- To evaluate the PPC function in both manufacturing and service organizations and to examine several dilemmas related to operations management, production planning and inventory control.

COURSE OUTCOMES:

After successful completion of the course, the students will be able to:

- Recognize the objectives, functions and applications of Production management and allied techniques.
- Categorize and solve different inventory control techniques, forecasting dilemmas, routing problems and scheduling troubles.
- Summarize various aggregate production planning techniques and integrating them to different departments to execute effective PPC functions.
- Inspect organizational performance, production systems, demand trends, location feasibility and cost analysis.
- Elaborate and estimate methods of line balancing, process sheets, production strategies, sales forecasting and maintenance.

COURSE CONTENT:

MODULE-I

My Diales

Roday

For John

Introduction: Introduction to various types of production system viz. mass production, job shop, batch production system, continuous production system, concept of production and operation management, objective & functions of PPC.

Forecasting: Time series method, moving average, weighted average, trend, seasonality, regression technique, delphi method.

MODULE - II

Aggregate planning: Definition, strategies, pure and mixed strategies, methods.

Master production schedule: Objective and functions, design of MPS, bill of materials.

Material requirement planning: Objectives, functions, MRP, MRP-II, limitations.

Capacity requirement planning: Definition, objectives, process of CRP, process sheet, rough cut capacity planning, loading, and preparation of CRP chart.

MODULE - III

Scheduling: Types, single machine scheduling, job shop scheduling, flow scheduling;

Sequencing: Various priority rules, line of balancing, rank and positional weight method, Kilbridge westner method.

Facility location and facility location problems: Factors affecting plant locations, single facility locations problems and its methods.

MODULE - IV

Types of layouts: layouts design procedure such as CORELAP, CRAFT etc., material handling system & their classification, principles, JIT & KANBAN, depreciation & methods of depreciation.

MODULE -V

Maintenance management: Types of maintenance strategies, breakdown and preventive maintenance, predictive and total productive maintenance, condition monitoring, individual and group replacement policies, make or buy decision, concept of original equipment effectiveness.

COURSE CONTENT:

MODULE-I

dispos ()

J.

8 1 6 °

Introduction: Sustainable development, indicators of sustainability, sustainability strategies, sustainable manufacturing, evolution of sustainable manufacturing, elements of sustainable manufacturing, theory of green manufacturing and its principles, need for green manufacturing, drivers and barriers of green manufacturing.

MODULE - II

Green manufacturing strategy: Manufacturing strategy, elements of manufacturing strategy, manufacturing out puts, competitive priorities; quality, delivery speed and reliability, cost efficiency, flexibility, order winners and order qualifier, tradeoff, production systems, manufacturing levers, competitive analysis, level of manufacturing capability, framework for formulating manufacturing strategy, implications of green manufacturing for manufacturing strategy.

MODULE - III

Life cycle approach of green manufacturing: Holistic and total Life-cycle approach, six step methodologies for green manufacturing (6-R approach), life cycle assessment (LCA), elements of LCA, life cycle costing, eco labelling target setting, data collection and processing, final evaluation by virtue of criteria, environmental management systems.

MODULE - IV

Green manufacturing technology: Definition of green manufacturing technology and practices, classifications of green manufacturing technology, advantages and disadvantages of implementation of green technology.

MODULE-V

Lean and Green manufacturing: Introduction, lean evolution & steps, introduction to lean manufacturing, definition of lean manufacturing, lean vs. green manufacturing: similarities and differences.

B. Tech, VII Sem.	. IP07TPE52	Product Design & Development	3	×	4	15	15	70	, 100	3

The objectives of this course are:

- To introduce design concepts and techniques to develop design ability in a product design.
- To provide knowledge about estimating and evaluating the feasible manufacturing design.
- To make aware of legal issues pertaining to product design.
- To provide knowledge of management of product development projects.

COURSE OUTCOMES:

After successful completion of the course, the students will be able to:

- Describe an engineering design and development process.
- Identify, formulate, and solve engineering problems.
- Design a system, component, or process to meet desired needs.
- Understand the professional and ethical responsibility.
- Recognize the legal issue pertaining to patents of product design.

COURSE CONTENT:

MODULE-I

Product design: Definition, design by evolution, innovation, essential factors of product design, production-consumption cycle, flow and value addition in the production-consumption cycle, the morphology of design, primary design phases and flow charting, role of allowance, concurrent engineering.

MODULE - II

Product design practice and industry: Introduction, product strategies, time to market, analysis of the product, three S's, standardization, Renard series, simplification.

Designer: Role, myth and reality, industrial design organization, basic design considerations.

MODULE - III

New products idea generation: Modification, product variants: adding, dropping, formal testing: new products, concept, product testing, market tests, evaluation, adoption, expansion and forecasting.

9-

Mingon O

Oslo,

Con Service

Economic factors influencing design: Product value, economic analysis, profit and competitiveness.

Product design for environment: Introduction, importance of DfE, environmental factors, scope of environmental impact, design guidelines for DfE.

MODULE - IV

Developing product strategy: Benefits of strategy, elements of a product strategy, setting objectives, selection of strategic alternatives, increasing sales/market share, increasing profitability, design for manufacturing and design for assembly, ergonomics in design, modular versus integral design.

Human engineering considerations in product design: Introduction, anthropometry, design of controls, the design of displays, man/machine information exchange.

MODULE -V

Intellectual property systems: Definition, concept of intellectual property, kinds of intellectual property, economic importance of intellectual property, importance of IPR, TRIPS and its implications.

Trademark: Introduction, historical development of the concept, need for protection, kinds of trademarks, and well-known trademarks, patents: historical development, concepts, novelty, utility, inventiveness/non-obviousness, copyrights, industrial design.

B. Tech. VII Sem.	IP07TPE53	Engineering Economics	3	¥	8	15	15	70	100	3.

The objectives of this course are:

 Prepare students to analyse cost/revenue data and carry out economic analyses in the decision-making process to justify or reject alternatives/projects on an economic basis.

COURSE OUTCOMES:

At the end of the course, the students will be able to:

- Describe the role of economics in the decision-making process and perform calculations in regard to interest formulas.
- · Trained towards cestimating the present, annual and future worth comparisons for cash flows.
- · Calculate the rate of return, depreciation charges and income taxes.
- Enumerate different cost entities in estimation and costing the elements of budgeting.
- Explain the importance of finance functions, financial ratios and solve related problems.

COURSE CONTENT:

MODULE - 1

Basic concepts and definitions: Methodology of economics, demand and supply-elasticity, theory of the firm and market structure, price and output determinations in different types of market.

MODULE - II

Public sector economics: Welfare economics, central and commercial marks and their functions, industrial policies, theory of localization, weber & surgent florence theory, investment analysis - NPV, ROI, IRR, payback period, SWOT analysis.

MODULE - III

Monetary and fiscal policy: Tools, impact on the economy, inflation, business cycle, cash flow-2, 3, 4 model.

MODULE - IV

Business forecasting: Elementary techniques, cost and revenue analysis, capital budget, break even analysis.

MODULE - V

						CT-I	CT-II	-2000	TOTAL	
B. Tech, VII Sem.		Advanced Manufacturing Processes	3	*	*	15	15	70	100	3

The objective of this course is to:

- To understand the principle of various advanced machining processes kinematics drive of machine tool.
- To impart knowledge about cutting different material removal, joining processes.
- To understand about various advanced metal forming processes.
- Explain how to identify suitable hybrid welding processes for joining dissimilar materials.
- To understand about various advanced casting processes.

COURSE OUTCOMES:

At the end of the course the students will be able to:

- Analyze real-life application in various organizations.
- Categorize different material removal, joining processes as per the requirements of material being used to manufacture end product.
- Choose material processing technique with the aim of cost reduction, reducing material wastage & machining time.
- Estimate process parameters affecting the product quality in various advanced machining of metals/ non-metals, ceramics and composites.

COURSE CONTENT:

MODULE-I

Advanced machining processes: Introduction, micro machining process, principle, material removal mechanism, parametric analysis and applications of processes such as ultrasonic machining (USM), abrasive jet machining (AJM), water jet machining (WJM), abrasive water jet machining (AWJM), electrochemical machining (ECM), electro discharge machining (EDM), electron beam machining (EBM), laser beam machining (LBM) processes, working principle of plasma are machining.

MODULE - II

Advanced machining theory & practices: Mechanisms of chip formation, shear angle relations, and theoretical determination of cutting forces in orthogonal cutting, analysis of turning, drilling and

STOP ISING

Course			PERIODS			EV	No. of Street, or other Parket			
Name & Semester	Course No.	SUBJECT	L	т	P	INTERNAL ASSESSMENT		ESE	SUB-	CREDIT
			46.5			CT-I	CT-II	THE STATE OF	TOTAL	1
B. Tech. VII Sem.	IP07TOE22	Principles of Management	3		- 04	15	15	70	100	3

The objectives of this course are:

- To help the students gain understanding of the functions and responsibilities of managers.
- To provide them tools and techniques to be used in the performance of the managerial job.
- To enable them to analyse and understand the environment of the organization.
- To help the students to develop cognizance of the importance of management principles.

COURSE OUTCOMES:

At the end of the course, the students will be able to:

- Discuss and communicate the management evolution and how it will affect future managers.
- Analyse and evaluate the influence of historical forces on the current practice of management.
- Identify and evaluate social responsibility and ethical issues involved in business situations and logically articulate own position on such issues.
- Explain how organizations adapt to an uncertain environment and identify techniques managers use to influence and control the internal environment. Practice the process of management's four functions: planning, organizing, leading, and controlling.
- Identify and properly use vocabularies within the field of management to articulate one's own
 position on a specific management issue and communicate effectively with varied audiences.
- Evaluate leadership styles to anticipate the consequences of each leadership style.
- Analyse and apply both qualitative and quantitative information to isolate issues and formulate best control methods.

COURSE CONTENT:

MODULE - 1

Introduction: Definition of management, science or art, manager v/s entrepreneur, types of managers managerial roles and skills, evolution of management- scientific, human relations, system and contingency approaches, types of business organizations, sole proprietorship, partnership, company, public and private enterprises, organization culture and environment, current trends and issues in management.

MODULE - H

July N

Waln

Men

See s

Planning: Nature and purpose of planning, types of planning, objectives, setting objectives, policies, strategic management, planning tools and techniques, decision making steps & processes.

MODULE - III

Organization: Nature and purpose of organizing, formal and informal organization, organization structure, types, line and staff authority, departmentalization, delegation of authority, centralization and decentralization, job design, human resource management, HR planning, recruitment selection, training & development, performance management, career planning and management.

MODULE - IV

Direction and leadership: Directing, individual and group behaviour, motivation, motivation theories, motivational techniques, job satisfaction, job enrichment, leadership, types & theories of leadership, effective communication.

MODULE - V

Controlling: System and process of controlling, budgetary and non-budgetary control techniques, use of computers and IT in management control, productivity problems and management, control and performance, direct and preventive control, reporting.

						CT-I	CT-II		TOTAL	
B. Tech. VII Sem.	IP07TOE23	Maintenance Management	3	12.1	3	1.5	15	70	100	3

The objective of this course is to:

- To develop the skill of maintenance functions in industry.
- · To provide the concept of various types of maintenance system used in industries.
- To impart knowledge on reasons for failure and the corrective and preventive measure adopted to reduce them.
- To create the ability of data, analyze failure cause and reliability engineering.
- To develop the new techniques of maintenance for minimizing the cost of maintenance and improving of life of equipment's.

COURSE OUTCOMES:

At the end of the course the students will be able to:

- Understand and be able to explain the aim and basics of maintenance activity.
- Use various methods of maintenance and procedures applied to equipment's.
- Be aware of methods of detection for faults and errors in operations.
- Apply the tools and techniques of repairing, faults analysis.

COURSE CONTENT:

MODULE - I

Introduction: Fundamentals of maintenance engineering, maintenance engineering its importance in material & energy conservation, inventory control, productivity, safety, pollution control etc. safety regulations, pollution problems, human reliability, total quality management (TQM), total productivity maintenance (TPM), environmental issues in maintenance, ISO 9000.

MODULE - II

Maintenance management: Types of maintenance strategies, Planned and unplanned maintenance, breakdown, preventive & predictive maintenance and their comparison, advantages & disadvantages, limitations of computer aided maintenance, maintenance scheduling, spare part management, inventory control, organization of maintenance department.

MODULE - HI

(- My

Sel .

Man Att is

Tribology in maintenance: Friction wear and lubrication, friction & wear mechanisms, prevention of wear, types of lubrication mechanisms, lubrication processes.

Lubricants: Types, general and special purpose, additives, testing of lubricants, degradation of _ lubricants, seal & packing.

MODULE - IV

Machine health monitoring: Condition based maintenance, signature analysis, oil analysis, vibration, noise and thermal signatures, on line & off line techniques, instrumentation & equipment used in machine health monitoring, instrumentation in maintenance, signal processing, data acquisition and analysis, application of intelligent systems, data base design.

TPM: Introduction, history, components, pillars of TPM, calculation of OEE, Terri technology.

MODULE - V

Reliability, availability & maintainability (RAM) analysis: Introduction to RAM failure mechanism, failure data analysis, failure distribution, reliability of repairable and non-repairable systems, improvement in reliability, reliability testing, reliability prediction, utilization factor, system reliability by Monte Carlo simulation technique, FMECA.

TEXT & REFERENCE BOOKS:

- Maintenance Engineering Hand Book, Higgins.
- Maintenance & Spare parts Management, Gopal Krishnan.
- Industrial Maintenance Management, S.K. Shrivastava.
- 4. Industrial Engineering, Hand book of Condition Monitoring, C.N.R. Rao.

B. Tech, VII Sem.	IP07TMC02	Indian Constitution	3	2.0	-	(3 +)	-		

The objective of this course is to:

- · To help the students to understand and explain the fundamental rights.
- To describe the uses of directive principle.
- Importance of union executives.
- Describe the composition of legislative assembly, its powers and functions.

COURSE OUTCOMES:

At the end of the course the students will be able to:

- Understand the meaning and importance of constitution.
- Identify and explore the basic features and modalities about Indian constitution.
- Realize the state and central policies (union and state executive), fundamental rights & their duties.
- Analyze the salient (outstanding) features of Indian constitution.
- Recognize the importance and significance of preamble with respect to Indian constitution.

MODULE-I

Introduction: Constitution-meaning of the term, sources and constitutional theory, features, citizenship preamble.

MODULE - II

Fundamental rights and duties: Fundamental rights, fundamental duties, directive principles of state policy.

MODULE - III

Union government: Structure of Indian union: federalism, Centre-state relationship President: role, power and position, Prime minister and council of ministers, cabinet and central secretariat, Lok Sabha, Rajya Sabha.

MODULE-IV

State Government: Governor: role and position, chief minister and council of ministers, state secretariat.

Course Name &	Course No.	SUBJECT	PI	RIO	DS	EVALUATIO	неме		
Semester	Com ac 150.	SUBJECT	L	T	p	INTERNAL ASSESSMENT	ESE	SUB- TOTAL	CREDITS
B. Tech.	TROTTO	CAD/CAM			1.0	THOUSE STREET		TOTAL	
VII Sem.	IP07PPC08	Lab		- 51	2	30	20	50	1

- To provide students with the writing and reading principles of "Engineering Drawing", which
 is a graphical universal language used in technical world for describing the shape and size of
 an object via supplying orthographic views and/or solid models associated with all the
 necessary dimensions, associated tolerances and annotations created in a CADD
 environment.
- To understand 3D drafting and analysis software used for modelling and analysis.

COURSE OUTCOMES:

- Ability to perform both 2D and 3D drafting of component using CAD software.
- Create solid models of objects, objects in basic shapes, composite bodies, custom built machine parts, building modules etc.
- Draw the orthographic views of an object in CAD environment (particularly in Autodesk AutoCAD environment).
- Create the orthographic views of an object from the solid model (particularly in Autodesk Inventor environment).
- Dimension the views, show some annotations, provide the size tolerance of functional features, and general tolerances.
- Explain and interpret the dimensions and the associated tolerances, some annotations.
- Read the given orthographic views; i.e., visualize the 3- Dimensional model of the object shown to its orthographic views and create its CAD model.
- Create auxiliary views, revolved views, sectional views.
- Ability to construct assemblies from the concepts learnt using drafting software.

- To provide comprehensive learning platform to students where they can enhance their employ ability skills and become job ready along with real corporate exposure.
- To enhance students' knowledge in one particular technology.
- · To increase self-confidence of students and helps in finding their own proficiency.
- To cultivate student's leadership ability and responsibility to perform or execute the given task.
- To provide learners hands on practice within a real job situation.
- Enhance and supplement the knowledge and skills of the students.
- Develop the students in terms of ability, competence and interpersonal relationship.

COURSE OUTCOMES:

- · Capability to acquire and apply fundamental principles of engineering.
- Become master in one's specialized technology.
- · Become updated with all the latest changes in technological world.
- Develop a skill of a multi-skilled engineer with sound technical knowledge, management, leadership and entrepreneurship skills.
- Ability to identify, formulate and model problems and find engineering solution based on a systems approach.
- Capability and enthusiasm for self-improvement through continuous professional development and life-long learning.

· Awareness of the social, cultural, global and environmental responsibility as an engineer.

The objective of this course is to:

- To define basic concept about robots, robotics and programming.
- To learn about coordinate frames, mapping and transformsplots.
- To understand kinematic modelling of the manipulators and theirworking.

COURSE OUTCOMES:

At the end of the course, the student will be able to:

- Apply knowledge of robotics for understanding, formulating and solving engineering problems.
- Demonstrate creativeness in designing and development of robotics.
- Analyse the kinematic of industrial robot.
- Design control laws for a simple robot.
- Identify, analyse and design of robots useful to the society.

COURSE CONTENT:

MODULE -I

Introduction to robotics: Evolution of robots and robotics, progressive advancement in robots, definitions and classifications, laws of robotics, robot anatomy and related attributes, repeatability, accuracy and precision, human arm characteristics, robot specification and notations, concept of robots programming, the future prospects.

MODULE - II

Coordinate frames, mapping and transforms: Coordinate frames, spatial descriptions and transformations, fundamental of translation, rotations and transformations, inverting a homogeneous transform, fundamental rotation matrices, yaw pitch and roll, yaw pitch and roll transformation, equivalent angle.

MODULE - III

Symbolic modeling of robots, direct kinematic model: Mechanical structure and notations, description of links and joints, kinematic modeling of the manipulator, Denavit-Hartenberg (D- H) representation, kinematic relationship between adjacent links, manipulator, transformation matrix, arm equations.

			PE	RIOI	S	EV	LUATIO	ON SCI	HEME	AND STREET, STATES
Name & Course No. Semester	Course No.	SUBJECT	L	Т	P	INTERNAL ASSESSMENT		ESE	SUB- TOTAL	CREDITS
Semester			1			CT-I	CT-II		TOTAL	THE STREET
B.Tech VIII Sem.	IP08THS41	Intellectual Property Rights	3	-	2	15	15	70	100	3

The objective of this course is to:

- Understand, define and differentiatevarious types of intellectual properties (IPs) and their roles in contributing to organizational competitiveness.
- Understand the framework of strategic management of Intellectual Property (IP).
- Appreciate and appraise different IP management (IPM) approaches and describing how pioneering firms initiate, implement and manage IPM programs.
- Explain how to derive value from IP and leverage its value in new product and service development.

COURSE OUTCOMES:

At the end of the course the students will be able to:

- Identify the different types of Intellectual properties (IPs), the right of ownership and scope
 ofprotection.
- Recognize the crucial role of IP in organizations of different industrial sectors for thepurposes of product and technology development.
- Identify activities and constitute IP infringements and the remedies available to the IP owner and
 describe the precautious steps to be taken to prevent infringement ofproprietary rights in products
 and technology development.
- Analyze ethical and professional issues which arise in the intellectual property right context.
- Apply intellectual property right principles (including copyright, patents, designs and trademarks) to real
 problems and analyze the social impact of intellectual property rights.
- Demonstrate a capacity to identify, apply and assess ownership rights and marketing protection under intellectual property law as applicable to information, ideas, new products and product marketing.

6 pryot

(or allow)

The post

(Com)

COURSE CONTENT:

MODULE - I

Introduction to intellectual property: Introduction, types of intellectual property, international organizations, agencies and treaties, importance of intellectual property rights.

MODULE - II

Trademarks: Purpose and function of trademarks, acquisition of trademarks rights, protectable matter, selecting and evaluating trademark, trademark registrationprocesses.

MODULE - III

Law of copyrights and law of patents: Fundamentals of copyrights law, originality of material, rights to reproduction, rights to perform the work publicly, copyright ownership issues, copyright registration, notice of copyright, international copyright law, foundation of patent law, patent searching process, ownership ights andtransfer.

MODULE - IV

Trade secrets and unfair competition: Trade secrets law, determination of trade secrets status, liability for misappropriations of trade secrets, protection for submission, trade secrets litigation, misappropriation of right of publicity and falseadvertising.

MODULE - V

New developments of intellectual property: New developments in trade law, copyright law, patent law, intellectual property audits international overview of intellectual property, international-trademark law, copyright law, international patent law, international development in trade secretslaw.

B.Tech VIII Sem.	IP08THS42	Safety Management &Labour Law	3			15	15	70	100	3

The objective of this course is to:

- To understand roles, responsibilities importance of health safety, and welfare in workplaces.
- To impart knowledge about material handling, air pollution control system, fire prevention and protection.
- To learn about safety audit, disaster control, safetyprinciples.
- To understand the labour laws and various acts applicable to industries.

COURSE OUTCOMES:

At the end of the course the students will be able to:

- To acquire the knowledge of substantive as well as procedural contents of safety management and labour laws.
- To develop an insight into the wages law, factory act etc.
- To gather an understanding of natures of accidents and its effects.
- To gather an understanding of natures of various types of hazards in industry.

COURSE CONTENT:

MODULE -I

Safety management: Concept's evolution of modern safety concept, safety policy, safety in organization, line and staff functions for safety, safety committee, budgeting for safety, techniques incident recall technique (IRT), disaster control, job safety analysis (JSA), safety survey, safety inspection, safety sampling, safety audit.

Safety in material handling: Ergonomic consideration in material handling, design, installation, operation and maintenance of conveying equipment, hoisting, traveling and slewing mechanisms.

MODULE -II

Design of air pollution control system: Industrial sources of air pollution, emission factors, regulations control strategies, policies, gaseous pollutant control; gas absorption in tray and packed towers, absorption with/without chemical reaction, removal of SO₂, absorption in fixed blades-breakthrough, removal of HCs/VOCs, NOx removal, wet scrubbers.

Cide

(bonlar

01

Busher

Jun Jun

Integrated air pollution control systems: Pollution control in process industries, pollution control in process industries like cement, paper, petroleum, petroleum products, textile, tanneries, thermal power plants dying and pigment industries, eco-friendly energy.

MODULE -III

Safety in metal working machinery and wood working machines: General safety rules, principles, maintenance, inspections of turning machines, boring machines, milling machine, planning machine and grinding machines, CNC machines, wood working machinery, types, safety principles, electrical guards, work area, material handling, inspection, standards and codes, saws, types,hazards.

MODULE -IV

Fire prevention and protection: Sources of ignition, fire triangle, principles of fire extinguishing, active and passive fire protection systems, various classes of fires, A, B, C, D, E, types of fire extinguishers, fire stoppers, hydrant pipes, hoses, monitors, fire watcher's layout of stand pipes, fire station, fire alarms and sirens, maintenance of fire trucks, foam generators, escape from fire rescue operations, fire drills, notice first aid forburns.

MODULE -V

Explosion protecting systems: Principles of explosion, detonation and blast waves, explosion, parameters, explosion protection, containment, flame arrestors, isolation, suppression, venting, explosion relief of large enclosure, explosion venting, inert gases, plant for generation of inert gas rupture disc in process vessels and lines explosion, suppression system based on carbon dioxide (CO2) and halons-hazards in LPG, ammonia (NH₃), sulphur dioxide (SO₂), chlorine (Cl₂) etc.

B.Tech VIII Sem.	IP08TOE31	Computer Aided Process Planning (CAPP)	3			15	15	70	100	3

The objective of this Course is to:

- Learn the fundamentals of computer aided process planning, group technology and applications.
- Study the simulation of machining processes, importance of design and manufacturing tolerances.
- Understand the role of optimal selection of machining parameters.

COURSE OUTCOMES:

At the end of the course, the student will be able to:

- Generate the structure of automated process planning system and uses the principle of generative and retrieval CAPP systems for automation.
- Select the manufacturing sequence and explains the reduction of total set up cost for a particular sequence.
- Predict the effect of machining parameters on production rate, cost and surface quality and determines the manufacturing tolerances.
- Explain the generation of tool path and solve optimization models of machining processes.
- Create awareness about the implementation techniques for CAPP.

COURSE CONTENT:

MODULE -I

Introduction to CAPP: Information requirement for process planning system, role of process planning, advantages of conventional process planning over CAPP, structure of automated process planning system, feature recognition, methods,

MODULE-II

Generative CAPP system: Importance, principle of generative CAPP system, automation of logical decisions, knowledge-based systems, inference engine, implementation, benefits.

Retrieval CAPP system: Significance, group technology, structure, relative advantages, implementation, and applications.

MODULE-III

Selection of manufacturing sequence: Significance, alternative-manufacturing processes, reduction of total set-up cost for a particular sequence, quantitative methods for optimal selection, examples.

MODULE-IV

Determination of machining parameters: Reasons for optimal selection of machining parameters, effect of parameters on production rate, cost and surface quality, different approaches, advantages of mathematical approach over conventional approach, solving optimization models of machining processes.

MODULE- V

Generation of tool path: Simulation of machining processes, NC tool path generation, graphical implementation, determination of optimal index positions for executing fixed sequence, quantitative methods.

The objective of this course is to:

- To understand the fundamentals of PIC microcontroller.
- Understand the working of microcontroller systems andable to determine its hardware andsoftware.
- Interface with real time systems.
- Understand the design application based on microprocessorssystems.

COURSE OUTCOMES:

At the end of the course, the student will be able to:

- Learn embedded system and its applications inindustry.
- Recognise working of microcontroller architecture and programmingmodel.
- Identify the concept of timer, interrupt, I/O port interfacing withmicrocontroller,
- Study the concept of interfacing with real timesystem.

COURSE CONTENT:

MODULE - I

Number Systems:Codes, digital electronics,logic gates, combinational circuits design, flip-flops, sequential logic circuits design, counters, shift registers.

Introduction to 8085 functional block diagram, registers, ALU, bus systems, timing and control signals,

MODULE - 11

Machine cycles: Instruction cycle and timing states, instruction timing diagrams, memory interfacing.

MODULE - III

Assembly language programming: Addressing modes, instruction set, simple programs in 8085, concept of interrupt, need for interrupts, interrupt structure, multiple interrupt requests and their handling,

programmableinterruptcontroller, interfacing peripherals, programmable peripheral interface (8255).

MODULE -IV

Interfacing analog to digital converter & digital to analog converter, multiplexed seven segments LED display systems, stepper motor control, data communication; serial data communication (8251), programmable timers (8253), 8086/8088 microprocessor and its advanced features.

MODULE -V

Introduction to digital control: Sampling theorem, signal conversion and processing, Z-transform, digital filters, implementation of digital algorithm.

Semester	1-1915		**			CT-I	СТ-П	10000	TOTAL	100000
B.Tech VIII Sem.	1P08TOE41	Supply Chain Management	3		*	15	15	70	100	3

The objective of this course is to:

- To understand supply chain activities, process planning, decision phases, importance and management of supply chains.
- To examine various drivers of supply chain for acquiring effectual performance, ease distribution and acquisition of production resources & Inventories.
- To understand about uncertainty, risk management, distribution network, role of location, capacity and forecasting in SC.
- To adapt drivers of supply chain, related framework and to appraise supply chain performance, pricing and sourcing decisions.

COURSE OUTCOMES

At the end of the course, the student will be able to:

- Demonstrate basic understanding about competition, logistics network, capable factors for supply chain designs and supply chain strategies.
- Acquire knowledge about distribution network: e-business, forecasting, network design and timeseries analysis.
- Decide technical understanding about demand, inventory, safety, pricing and information technology
- Manage and measure sourcing decisions in supply chain, product availability under capacity constraints, optimal levels of product, services and resources.

COURSE CONTENT:

MODULE -I

Building a strategic framework to analyze supply chains: Supply chain, its objective and the importance of supply chain decisions, decision phases in a supply chain, process view of a supply chain, examples of supply chains, supply chain performance, achieving strategic fit and scope, competitive and supply chainstrategies, achieving strategic fit, expanding strategic scope, supply chain drivers and metrics, drivers of supply chain performance, framework for structuring drivers,

facilities, inventory, transportation, information, sourcing, pricing.

MODULE- II

Designing the supply chain network: Designing distribution networks and applications to e-business the role of distribution in the supply chain, factors influencing distribution network design, design options for a distribution network, e-business and the distribution network, distribution networks in practice.

Network design in the supply chain: The role of network design in the supply chain, factors influencing network design decisions framework for network design decisions, models for facility location and capacity allocation, role of IT in network design, making network design decisions in practice.

Network design in an uncertain environment: The impact of uncertainty on network design, discounted cash flow analysis, representations of uncertainty, evaluating network design decisions using decision trees. AMtires:evaluationofsupply.chaindesign decisions under uncertainty, risk management and networkdesign175, making supply chain decisions under uncertainty inpractice.

MODULE-III

Planning demand and supply in a supply chain: Demand forecasting in a supply chain, the role of forecasting in a supply chain, characteristics of forecasts, components of a forecast and forecasting methods, basic approach to demand forecasting, time-seriesforecasting methods, measures of forecast error, forecasting demand at Tahoe salt, role of 11 in forecasting, risk management in forecasting, forecasting inpractice.

Aggregate planning in a supply chain: Role of aggregate planning in a supply chain, the aggregate planning problem, aggregate planning strategies, aggregate planning using linear programming, aggregate planning in excel, role of IT in aggregate planning, implementing aggregate planning in practice.

Planning supply and demand in a supply chain: Managing predictable variability, responding to predictable variability in a supply chain, managing supply, managing demand, implementing solutions to predictable variability in practice.

MODULE- IV

Planning and managing inventories in a supply chain: Managing economies of scale in a supply chain, cycle inventory, the role of cycle inventory in a supply chain, economies of scale to exploit fixed costs, economies of scale to exploit quantity discounts, short-term discounting, trade promotions, managing multiechelon cycle inventory estimating cycle inventory-related costs in practice.

Managing uncertainty in a supply chain: Safety inventory, the role of safety inventoryin a supply

Cide al

Ast 1

a man

Charles Charles

chain, determining appropriate level of safety inventory, impact of supply uncertainty on safety inventory, impact of aggregation on safety inventory impact of replenishment policies on safety inventory, managing safety, inventory in a multic-helon supply chain, role of II in inventory management, estimating and managing safety inventory impractice.

Determining the optimal level of product availability: The importance of the level of product availability, factors affecting optimal level of product availability, managerial lever; to improve supply chain profitability, setting product availability for multipleproducts under capacity constraints, setting optimal levelsofproduct, availability impractice.

MODULE- V

Designing and planning transportation networks: fransportation in a supply chain, the role of transportation in a supply chain, modes of transportation and their performance characteristics, transportation infrastructure and policies, design options for a transportation network trade-off in transportation design, tailored transportation, role, of IT in transportation risk management in transportation, making transportation decisions inpractice.

Managing cross-functional drivers in a supply chain: Sourcing decisions in a supply chain, the role of sourcing in a supply chain, in-house or outsource, third-party and fourth-party logistics providers, supplier scoring and assessment, supplier selection-auctions and negotiations contracts and supply chain performance, design collaboration, the procurement process, sourcing planning and analysis, role of IT in sourcing, riskmanagement in sourcing, making sourcing decisions inpractice.

Course Name & Semester	Course No.	SUBJECT	1.	r	r		ASSESSMENT CT-1 CT-II		SUB- TOTAL	CREDITS	
B.Tech VIII Sem.	IP08TOE42	Composite Materials Technology	j			15	15	70	100	3 .	

The objective of this course is to:

- Analyze the basic concepts of composite materials and application of composite material in various engineering fields.
- Apply the requirements for production and application of composite materials.
- Explain students to various techniques used for composite manufacturing.
- Describe concepts of nano-materials, nano technology, and use of nano materials.
- Analyze micro mechanical properties of lamina using various approaches.

COURSE OUTCOMES:

At the end of the course, the student will be able to:

- Identify and evaluate the properties of fibre resoforcements, polymer massis materials and commercial composites.
- Apply competency in one or more common composite manufacturing techniques, and be able to select the appropriate technique for manufacture of fibre-reinforced composite products.
- Analyse the elastic properties and simulate the mechanical performance of composite laminates;
 and understand and predict the failure behaviour of libra-reinforced composites.
- Apply knowledge of composite nachanical performance and manufacturing methods to a composites design project.
- Critique and select literature and apple the knowledge gained from the course in the design and
 application of fibre-reinforced composites.

COURSE CONTENT:

MODULE-1

Introduction to composites: Definitions, typical rendiscements and matrices, properties of fiber composites, mechanical weight, chemical reastance, etc., compared with standard materials, particular composites, quality assurance, outface of monotocturing methods, eccasionic aspects; dependence of properties on manufacturing route, typical manufacturing defects, applicationsfiber strengthening, fiber flaws, critical length, critical softence fraction, natural composites (word,

Chenter

bone,etc.)

MODULE-11

Fibermanufacturing methods: Physical and chemical characteristics, mechanical and other propertiesof commonly used fibers; carbon, place around and other organics, ceramics, fiber chating to achieve compatibility with matrix, use of statistical methods to characterize tiber behavior, naturally-occurring (cellulose) fibers, whisker, typical properties, manufacturing methyds.

MODULE - III

Manufacture of polymer matrix composites Principles of manufacturing processes (open and closed mould), including: hand and spray lay-up, press moulding, injection moulding, resin injection, RRIM, filament winding spultrusion, centrifugal casting antoclave, prepreg and other starting materials, ere machine methods for manufacture of commentes, contrag, drilling and other finishing operations,

MODULE - IV

Engineering properties stiffness and strength the metrical aspects, volume and weight fraction, unidirectional continuous fiber systems, stillness and strength, discontinuous fiber, short fiber systems, length and orientation distributions, wrongs remforcements hybrids, faithre theories for unidirectional lamina, micro mechanics theory

MODULE - V

Mechanical testing:Determination of stiffuces and strengths of unidirectional compositor tersion, compression, flexure and shear typical standard methods, use of photo clastic, holographic and other methods of strain measurement.

Metal matrix systems: Metals and alloys, solidification processes, diffusion bonding, mechanical properties, boron fibre reinforced alumin are and or asum alloys, alumina fibre reinforced aluminium alloys, silicon carbide fibre reinforced aluminous alloys particulate systems.

B.Tech VIII Sem,	IP08TOE43	Finite Element Method	3	*	÷	15	15	70	100	3

The objective of this course is to:

- Analyze the basic concept about principle of finite element method.
- · Determine the coordinate system and shape function for various element.
- Learn plotting governing equations of linear and higher order.
- · Define basic concept of matrix formulation.

COURSE OUTCOMES:

At the end of the course, the student will be able to:

- Apply concept of shape functions for optimizing decision problem.
- · Understand the concepts behind formulation methods in FEM.
- Identify the application and characteristics of FEA elements such as bars, beams, plane and isoparametric elements.
- Develop element characteristic equation and generation of global equation.
- Able to apply suitable boundary conditions to a global equation for bars, trusses, beams, circular shafts, heat transfer, fluid flow, axi symmetric and dynamic problems and solve them displacements, stress and strains induced.
- Identify boundary conditions to solve dynamic problems under thermal aspects and related to torsion of non-circular shafts.

COURSE CONTENT:

MODULE -1

Basic concept of FEM: Historical background, basic concept and steps in fem, mathematical modeling of field problems in engineering, governing equations, discrete and continuous models, boundary and initial value problems, one dimensional second order equation, discretization, linear and higher order elements, introduction of FEM software and steps.

Matrix displacement formulation: Matrix displacement equations, solution of matrix displacement

Piste 9

01

5 NOV

The state of the s

equations, techniques of saving computer memory requirements, finite element formulation.

MODULE -II

Natural coordinate systems and shape function: Basic concept of natural coordinate, 1-D & 2-D natural coordinate, concept of shape functions, convergence requirements, pascal triangle, shape function for linear and plain elements, shape functions using Lagrange polynomials, shape functions for screndipity family elements, degrading technique for nodes.

MODULE - III

Strain displacement matrix: Strain displacement matrix for linear and plain element, strain displacement matrix for beam, linear and plain elements.

Stiffness matrix: Concept of element stiffness matrix for linear and plain elements, stiffness matrix for bar & trusses, stiffness matrix for linear and plain elements, force vectors, body forces and thermal loads, plate and shell elements, finite representation of infinite bodies, element aspect ratio, quadrilateral and higher order element vs mesh refinement.

MODULE - IV

Assembling of stiffness matrix: Assembly of elemental matrices, boundary conditions and solution, direct approach, strain energy, Castigliano's first theorem, minimum potential energy, Galerkin's method, Galerkin's method applied to elasticity problems, weighted residual methods, variational formulation of boundary value problems, Ritz technique, isoparametric formulations.

MODULE - V

Finite element solutions: Numerical integration and application to plane stress problems, solid mechanics and heat transfer, longitudinal vibration and mode shapes, fourth order beam equation, transverse deflections and natural frequencies, bar, trusses & beams, plane stress and plane strain problems, use of higher order elements, solution of dynamic problems application to thermal problems, torsion of non-circular shafts.

B.Tech VIII Sem.	IP08TMC03	Essence of Traditional Knowledge	3					-	-	14

- The course aims at imparting basic principles of thought process, reasoning and inferencing, sustainability is at the core of Indian traditional knowledge systems connecting society and nature.
- Holistic life style of yogic-science and wisdom capsules in Sanskrit literature are also important in modern society with rapid technological advancements and societal disruptions.
- The course focuses on introduction to Indian knowledge system, Indian perspective of modern scientific world-view and basic principles of yoga and holistic health care system.

COURSE OUTCOMES:

 Ability to understand, connect up and explain basics of Indian traditional knowledge modern scientific perspective.

COURSE CONTENT:

- Basic structure of Indian knowledge system: अष्टादशियदा -४येद, ४५पयेद (आयुर्वेद, धनुर्वेद, गन्धर्वयेद, स्थापत्य आदि) ६येदांग (शिक्षा, कल्प, निरुक्त, ज्योतिष, छंद) ४५पाङ्ग (धर्मशास्त्र, मीमांसा, पुराण, तर्कशास्त्र).
- Modern science and Indian knowledge system.
- Yoga and holistic health care.
- Case studies.
