INTERMEDIATE MICROECONOMICS - I

Course Description

The course is designed to provide a sound training in microeconomic theory to formallyanalyze the behaviour of individual agents. Since students are already familiar with thequantitative techniques in the previous semesters, mathematical tools are used to facilitateunderstanding of the basic concepts. This course looks at the behaviour of the consumerand the producer and also covers the behaviour of a competitive firm.

Course Outline

1. Consumer Theory

Utility; Diminishing Marginal Utility; Equi-Marginal Utility; budget constraint; revealed preference.

2. Production, Costs and Perfect Competition

Isoquants; production with one and more variable inputs; returns to scale;

3. Costs

Cost curves in the short run and long run.

4. Input Markets

Labour and land markets - basic concepts (derived demand, productivity of an input, marginal productivity of labour, marginal revenue product); demand for labour;

STATISTICAL METHODS FOR ECONOMICS

Course Description

This is a course on statistical methods for economics. It begins with some basic concepts and terminology that are fundamental to statistical analysis and inference. It then develops the notion of probability, followed by probability distributions of discrete and continuous random variables and of joint distributions. This is followed by a discussion on sampling techniques used to collect survey data. The course introduces the notion of sampling distributions that act as a bridge between probability theory and statistical inference. The semester concludes with some topics in statistical inference that include point and interval estimation.
