

Minutes of Meetings (MoM) of Board of Studies (BoS)

Academic Year : 2021-22

School : School of Studies of Engineering and Technology

Department : Chemical Engineering

Date and Time : October 29, 2021 (M.Tech.)

Venue : Online

The scheduled meeting of member of Board of Studies (BoS) of Department of Chemical Engineering, School of Studies of Engineering and Technology, Guru Ghasidas Vishwavidyalaya, Bilaspur was held today (October 29, 2021) in online mode (via Google Meet) to design and discuss the M. Tech. (I and II semesters) scheme and syllabi. The meeting was conducted in online mode due to Covid-19 pandemic. The following members were present (Online) in the meeting:

1. Prof. A. B. Soni (External Expert Member BoS, Dept. of Chemical Engg., NIT Raipur)
2. Prof. S. N. Saha (Member BoS, Dept. of Chemical Engg.)
3. Dr. Anil Kumar Chandrakar (HOD (I/c), Associate Prof., Dept. of Chemical Engg.-cum-Chairman, BoS)
4. Mr. Neeraj Chandrakar (Invited Member, Assistant Professor, Dept of Chemical Engg.)
5. Mr. G.P. Dewangan (Invited Member, Assistant Professor, Dept. of Chemical Engg.)
6. Dr. Raghendra Singh Thakur (Invited Member, Assistant Professor, Dept. of Chemical Engg.)
7. Mr. Vishnu Prasad Yadav (Invited Member, Assistant Professor, Dept. of Chemical Engg.)
8. Mr. Saurabh Meshram (Invited Member, Assistant Professor, Dept. of Chemical Engg.)
9. Dr. Sandeep Dharmadhikar (Invited Member, Assistant Professor, Dept. of Chemical Engg.)
10. Dr. Ghoshna Jyotr (Invited Member, Assistant Professor, Dept of Chemical Engg.)

The committee discussed the scheme and syllabi of M.Tech. Course (First and Second Year) and after incorporating the changes, as identified by the members, the final draft of the scheme approved by all the members.

The following courses were revised in the M. Tech.:

- ❖ Advanced Fluidization Engineering (CHPATT3)
- ❖ Advanced Chemical Process Modeling (CHPATP3)
- ❖ Advanced Process Control (CHPATP4)

- ❖ Process Intensification (CHPATP5)
- ❖ Industrial Process Control (CHPBTP5)

The following new courses were introduced in the of B. Tech. Second year (III and IV Semesters) and M. Tech.:

- ❖ Bioprocess Engineering (CHPATP6)
- ❖ Advanced Separation Processes (CHPATT2)
- ❖ Advanced Reaction Engineering (CHPATP1)
- ❖ Research Methodology and IPR (CHPATC1)
- ❖ Advance Transport Phenomena (CHPBTT1)
- ❖ Computational Fluid Dynamics (CHPBTP1)
- ❖ Fuell Cell Technology (CHPBTP2)
- ❖ Process Plant Design & Flow Sheeting (CHPBTP3)
- ❖ Business Analytics (MSPBT01)
- ❖ Industrial Safety (IPPBT03)
- ❖ Operations Research (IPPNT03)
- ❖ Cost Management of Engineering Projects (CEPBT04)
- ❖ Composite Materials (MEPBT05)
- ❖ Waste to Energy (CHPBTO7)
- ❖ Internet of Things (ECPBT07)
- ❖ MOOCS (MCPBT08)
- ❖ Advanced Chemical Engineering Lab (CHPBLT01)
- ❖ Mini Project (CHPBT1)
- ❖ English for Research Paper Writing (ELPBTX1)
- ❖ Stress Management by Yoga (PEPBTX2)
- ❖ Disaster Management (CEPBTX3)
- ❖ Constitution of India (LAPBTX4)
- ❖ Dissertation Stage-I (CHPCPT1)
- ❖ Dissertation Stage-II (CHPCDPT1)

Minutes of Meetings (MoM) of Board of Studies (BoS)

Academic Year : 2021-22

School : School of Studies of Engineering and Technology

Department : Chemical Engineering

Date and Time : October 1, 2021 (B.Tech.)

Venue : Online

The scheduled meeting of member of Board of Studies (BoS) of Department of Chemical Engineering, School of Studies of Engineering and Technology, Guru Ghasidas Vishwavidyalaya, Bilaspur was held today (October 1, 2021) in online mode (via Google Meet) to design and discuss the B. Tech, Second year (III and IV semesters) scheme and syllabi. The meeting was conducted in online mode due to Covid-19 pandemic. The following members were present (Online) in the meeting:

- 1 Prof. A. B. Soni (External Expert Member BoS, Dept. of Chemical Engg., NIT Raipur)
2. Prof. S. N. Saha (Member BoS, Dept. of Chemical Engg.)
3. Dr. Anil Kumar Chandrakar (HOD (I/c), Associate Prof., Dept. of Chemical Engg.-cum-Chairman, BoS)
4. Mrs. Anuradha N. Joshi (Member BoS, Assistant Professor, Dept. of Chemical Engg.)
5. Dr. Sandeep Singh (Invited Member, Assistant Professor, Dept of Mathematics)
6. Mr. Neeraj Chandrakar (Invited Member, Assistant Professor, Dept of Chemical Engg.)
7. Dr. Amit Jain (Invited Member, Assistant Professor, Dept. of Chemical Engg.)
8. Mr. G.P. Dewangan (Invited Member, Assistant Professor, Dept. of Chemical Engg.)
9. Dr. Raghwendra Singh Thakur (Invited Member, Assistant Professor, Dept. of Chemical Engg.)
10. Mr. Vishnu Prasad Yadav (Invited Member, Assistant Professor, Dept. of Chemical Engg.)
11. Mr. Saurabh Meshram (Invited Member, Assistant Professor, Dept. of Chemical Engg.)
12. Dr. Sandeep Dharmadhikaro (Invited Member, Assistant Professor, Dept. of Chemical Engg.)
13. Dr. Ghoshna Jyoti (Invited Member, Assistant Professor, Dept of Chemical Engg.)

The committee discussed the scheme and syllabi of B Tech. Second year (III and IV semesters) at length and after incorporating the changes, as identified by the members, the final draft of the scheme and syllabi is approved by all the members.

The following courses were revised in the of B. Tech. Second year (III and IV Semesters) and M. Tech.:

- ❖ Material and Energy Balance Calculations (CH203TPC01)
- ❖ Fluid Mechanics (CH203TPC02)
- ❖ Thermodynamics-I (CH203TPC03)
- ❖ Numerical Methods in Chemical Engineering (CH204TBS07)
- ❖ Thermodynamics-II (CH204TPC04)
- ❖ Particle and Fluid Particle Processing (CH204TPC05)
- ❖ Process Instrumentation (CH204TPC06)

External Industry expert member of the BoS. Mr. Suprangya Mohanty (Deputy Manager, HINDALCO. Mahan Unit. Singrouli) could not attend the meeting due to his pre occupation. but he was apprised of the outcome of the meeting which he approved technically.

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPATT2	ADVANCED SEPARATION PROCESSES	3:0:0	3

Course Objective : New Course Introduced

- To familiarize students with various advanced aspects of separation processes and the selection of separation processes
- To enable students to understand the principles and processes of adsorption, membrane separation and chromatography and to design an absorber or a membrane unit to achieve a specified separation
- To introduce them to new trends used in the separation technologies

Course Content:

Conventional Separation Processes: Absorption, Adsorption, Conventional separation processes - Distillation, Drying, Extraction, Diffusion, Leaching, Crystallization. Advances in separation techniques based on size, surface properties, ionic properties. Cross flow filtration, Electro filtration, Dual functional filter, Surface based solid-liquid separations involving a second liquid, Sirofloc filter. Bubble and Foam Fractionation: Nature of bubbles and foams, stability of foams, foam fractionation techniques, batch, continuous, single stage and multistage columns. Types and choice of membranes, Plate and frame, Spiral wound membranes, Tubular and hollow fibre membrane reactors, Membrane Permeates, Dialysis, Reverse osmosis, Nano-filtration, Ultrafiltration, Microfiltration, Dialysis, Ceramic membranes. Membrane Separation: Characteristics of organic and inorganic membranes, basis of membrane selection, osmotic pressure, partition coefficient and permeability, concentration polarization, electrolyte diffusion and facilitated transport, Industrial applications of Micro-filtration, Ultra-Filtration, Reverse Osmosis, Electro-Dialysis. Special Processes: Liquid Membrane Separation, Super-Critical Extraction, Adsorptive Separation-Pressure, Vacuum and Thermal Swing, Pervaporation and Permeation, Nano-Separation, Chromatographic Methods of Separation Gel: Solvent, Ion and High Performance Liquid Chromatography.

Course Outcomes :

At the end of the course, the student will be able to:

- List situations where liquid-liquid extraction might be preferred to distillation, make a preliminary selection of solvent using group-interaction rules, Size simple extraction equipment
- Differentiate between chemisorption and physical adsorption, List steps involved in adsorption of a solute, and which steps may control the rate of adsorption, explain the concept of breakthrough in fixed-bed adsorption
- Explain how crystals grow, Explain the importance of super saturation in crystallization
- Describe effects of mixing on super saturation, mass transfer, growth, and scale-up of crystallization

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPATP1	ADVANCED REACTION ENGINEERING	3:0:0	3

Course Objective :

New Course Introduced

This Subject is essential for Design of Reactor especially heterogeneous reactors. Students will learn the energy balance, temperature and concentration profiles in different reactors, advance design aspects of multiple reactors; students will get insight of importance of population balance of particles.

Course Content:

Non-elementary Kinetics Importance: Approximations for formulations of Rate laws, Formulations of Kinetic model. Effect of flow on conversions in Reactors: Semi batch Reactors Importance and examples of applications , Material Balance on Semi batch Reactor, Multiple reaction in Semi batch Reactors, Conversion Vs Rate in Reactors, Use of POLYMATHS to solve the equations and understanding the profiles Non-Isothermal reaction modelling in CSTR & Semi-Batch reactor: Energy Balance equations for CSTR, PFR and Batch reactors, Adiabatic operations Temperature conversion profiles in PFR, CSTR, Steady state tubular reactor with heat exchange. Need for Multi-staging CSTR with multiple stages: Exothermic and Endothermic Reaction with examples, CSTR with heat effects, Multiple reactions in CSTR and PFR with heat effects, Semi batch Reactors with heat exchange. Design of PFR and Packed Bed Tubular Reactors: Radial and Axial mixing in Tubular reactors, unsteady state in non-isothermal energy balance, CSTR, Energy balance in Batch Reactors, Volume of reactors calculations for non-isothermal reactors. Optimal Design of Reactors for Reversible exothermic reactions: Unsteady state non-isothermal reactor design, adiabatic operation in batch, Heat effects in semi batch unsteady state operation. Auto thermal Plug flow reactors and packed tubular reactors. PFR with inter stage cooling. Shift of Energy and material balance lines for reversible reactions in CSTR, Examples of optimal design of PFR and Semi batch and CSTR Exothermic Reactions. Catalytic reactions: Theory and modelling: Global rate of reaction, Types of Heterogeneous reactions Catalysis, Different steps in catalytic reactions, Theories of heterogeneous catalysis. Steady State approximation, formulations of rate law, Rate laws derived from the PSSH, Rate controlling steps, Eiley-Rideal model, Reforming catalyst example :Finding mechanism consistent with experimental observations Evaluation of rate law parameters, packed beds : Transport and Reactions, Gradients in the reactors : temperature. Porous media reactors: Mass transfer coefficients, Flow effects on spheres tube and cylinders, External Mass Transfer pore diffusion, structure and concentration gradients Internal Effectiveness Factor Catalytic wall reactor: limiting steps reactions and mass transfer limiting Porous catalyst on tube wall reactors Design of packed bed porous catalytic reactors: Mass transfer limited reactions in packed bed. Fluidized bed reactor modelling: Geldart Classification of powders, Fixed bed vs. fluidized bed Why fluidized bed, important parameters pressure drop in fixed bed, Class I model Arbitrary Two Region Flow Models, Class II Chemical Reactor: Plug Flow or Mixed Flow Model. Class III Modelling

Handwritten signatures and dates:
 - 29/11/21
 - 29/11/21
 - 29/11/21
 - 29/11/21

the Bubbling Fluidized Bed Reactor, BFB, The Kunii-Levenspiel bubbling bed model, Gas Flow Around and Within a Rising Gas Bubble in a Fine particle BFB, Reactor performance of BFB. Application of Population Balance Equations for reactor modelling: Particle size distribution, Distribution Functions in Particle Measuring Techniques, Particle distribution model in colloidal particle synthesis in batch reactor, Moments of Distribution, Nucleation rate based on volumetric holdup versus crystal growth rate.

Course Outcomes :

At the end of the course, the student will be able to:

- Evaluate heterogeneous reactor performance considering mass transfer limitations
- Perform the energy balance and obtain concentration profiles in multiphase reactors
- Estimate the performance of multiphase reactors under non-isothermal conditions
- Understand application of modern reactor technologies

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHP/ATP6	BIOPROCESS ENGINEERING	3:0:0	3

Course Objective:

New Course Introduced

- To learn the principles of bioprocessing for traditional chemical engineering in the design and development of processes involving biocatalyst
- To study engineering principles in the development of products based on living cells or subcomponents of such cells
- To learn and develop quantitative models and approaches related to bioprocesses
- To learn mechanistic models for enzyme catalyzed reactions for large scale production of bio products

Course Content :

Introduction: Biotechnology and bio processing. An overview of biological basics. Basics of enzyme and microbial kinetics. Operating considerations for bioreactors: cultivation method, modifying batch and continuous reactors, immobilized cell systems, solid state fermentations. Advance Enzyme Kinetics: Models for complex enzyme kinetics, modelling of effect of pH and temperature, models for insoluble substrate, models for immobilized enzyme systems, diffusion limitations in immobilized enzyme system, electrostatic and steric effects. Bioreactors: Selection, scale-up, operation and control of bioreactors: Scale-up and its difficulties, bioreactor instrumentation and control, sterilization of process fluids. Modifications of batch and continuous reactors, chemostat with recycle, multistage chemostat, fed-batch operation, perfusion system, active and passive immobilization of cells, diffusional limitations in the immobilized system, solid state fermenters. Homogeneous and heterogeneous reactions in bioprocesses: Reaction thermodynamics, growth kinetics with Plasmid instability, The Thiele Modulus and effectiveness factor, diffusion and reaction in waste treatment lagoon. Reactors and choice of reactors. Recovery and purification of products: Strategies to recover and purify products, separation of insoluble products, cell disruption, separation of soluble products

Course Outcomes :

At the end of the course, the student will be able to:

- Understand the different cells and their use in biochemical processes.
- Understand the role of enzymes in kinetic analysis of biochemical reaction.
- Analyze bioreactors, upstream and downstream processes in production of bio-products
- Demonstrate the fermentation process and its products for the latest industrial revolution

Texts Books :

- Bailey J.E. and Ollis D.F., Biochemical Engineering Fundamentals, McGraw-Hill

23/11/21 *29/10/21* *29/11/21*

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPATC1	RESEARCH METHODOLOGY AND IPR	2:0:0	2

Course Objective:

New Course Introduced

- To familiarize participants with basic of research and the research process
- To enable the participants with basic understanding of types of data and data collection methods
- To enable the participants in conducting research work and formulating research synopsis and report
- To familiarize participants with IPR
- To impart knowledge for enabling students to develop data analytics skills and meaningful interpretation to the data sets so as to solve the research problem

Course Content:

Introduction and Design of research: Meaning, objectives and significance of research, types and parameters of research, research process, identification and definition of the research problem, definition of construct and variables, pure and applied research design, exploratory and descriptive design methodology, qualitative vs. quantitative research methodology, field studies, field experiments vs. laboratory experiments, research design in social and physical sciences. Data and Methods of Data Collection: Survey, assessment and analysis: data collection, primary and secondary sources of data, Collection of primary data through questionnaire and schedules. Collection of secondary data, processing and analysis of data. Sample survey, simple random sampling, stratified random sampling, systematic sampling, cluster sampling, area sampling and multistage sampling. Pilot survey, scaling techniques, validity & reliability. Data Analysis: Procedure for testing of hypothesis, the null hypothesis, determining levels of significance, type I and II errors, grouped data distribution, measures of central tendency, measures of spread/dispersion, normal distribution, analysis of variance: one way, two way, chi square test and its application, students 'T' distribution, non-parametric statistical techniques, binomial test. Correlation and regression analysis - discriminate analysis - factor analysis - cluster analysis, measures of relationship Research report preparation and presentation: Review of literature: historical survey and its necessity, layout of research plan, meaning, techniques and precautions of interpretation, types of report: technical report, popular report, report writing - layout of research report, mechanics of writing a research report. Writing bibliography and references. Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.

Course Outcomes :

At the end of the course, the student will be able to:

- Understand research problem formulation
- Analyze research related information

- Follow research ethics
- Understanding that when IPR would take such important place in growth of individuals & nation, it is needless to emphasize the need of information about Intellectual Property
- Right to be promoted among students in general & engineering in particular

Texts Books :

Department of Chemical Engineering, GGV		M.Tech-2021-22	
SUBJECT CODE	SUBJECT NAME	L:T:P	Credit
CHPBTT1	ADVANCED TRANSPORT PHENOMENA	3:0:0	3

New Course Introduced

Course Objective :

- To familiarize the student with basic concepts of transport phenomena and brief review of mathematics
- To enable students to understand the equations of change for isothermal flow and for non-isothermal flow
- To introduce them details of equations of change for multi component systems
- To give them insight into properties of two-dimensional flows and aspects of dimensional analysis

Course Content :

Review of vector and tensor operations, vector calculus, curvilinear coordinate systems. Review of Shell Balance: Equations of Continuity, Motion and Mechanical Energy, Time Derivatives, Use of the Equations to Solve Flow Problems, Dimensional Analysis of the Equations of Change. Velocity Distributions with more than one Independent Variable: Time Dependent Flow of Newtonian Fluids Laminar and Turbulent Flows, Equations of Change for Non-Isothermal Systems: The Energy Equation, Forced and Free Convection, Dimensional Analysis of the Equations of Change for Non-Isothermal Systems. Heat Conduction with an Electrical Heat Source, Viscous Heat Source. Unsteady Heat Conduction in Solids, Temperature Distributions in Turbulent Flow. Empirical Expressions for the Turbulent Heat Flux Temperature Distribution for Turbulent Flow in Tubes. Macroscopic Balances for Non-Isothermal Systems: Steady State Problems with Flat Velocity Profiles, Concentration Distributions in Solids, Laminar Flow: Shell Mass Balances Boundary Conditions, Diffusion through a Stagnant Gas Film, Diffusion with a Heterogeneous Chemical Reaction. Concentration Distributions with more than One Independent Variable: Time-Dependent Diffusion, Steady-State Transport in Binary Boundary Layers, Concentration Distributions in Turbulent Flow, Semi-Empirical Expressions for the Turbulent Mass Flux, Enhancement of Mass Transfer by a First-Order Reaction in Turbulent Flow. Interphase Transport in Multi-Component Systems: Transfer Coefficients in Single and Two phases, Mass Transfer and Chemical Reactions. Macroscopic Balances for Multi-Component Systems: Macroscopic Mass and Momentum Balance and its application to steady state problems.

Course Outcome :

At the end of the course, the student will be able to:

- Understand the mechanism of momentum, heat and mass transport for steady and unsteady flow
- Perform momentum, energy and mass balances for a given system at macroscopic and microscopic scale

Department of Chemical Engineering, GGV		M.Tech-2021-22	
3.	Solve the governing equations to obtain velocity, temperature and concentration profiles		
4.	Model the momentum, heat and mass transport under turbulent conditions. Develop analogies among momentum, energy and mass transport		

Department of Chemical Engineering, GGV

M.Tech-2021-22

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPBTP1	COMPUTATIONAL FLUID DYNAMICS	3:0:0	3

Course Objective :

New Course Introduced

- To provide an introduction to the scientific principles and practical engineering applications of computational fluid dynamics
- To give exposure to the commercial software ANSYS Fluent

Course Content :

Computational approach to Fluid Dynamics and its comparison with experimental and analytical methods, Basics of PDE: Elliptic, Parabolic and Hyperbolic Equations, Review of Navier-Stokes Equation and simplified forms, grid generation, structured and unstructured grids, choice of suitable grid, grid transformation of equations, some modern developments in grid generation for solving engineering problems, CFD essentials, Finite difference method (FDM), finite volume method (FVM) and finite element method (FEM); Discretization of ODE and PDE, Explicit and Implicit scheme to solve heat and fluid flow problems, Application of 1st order and 2nd order Upwind Scheme, Application of SIMPLE, SIMPLER algorithm to solve fluid flow problems, Simulation of CFD problems using Fluent.

Course Outcome :

After learning the course, the students will be able to:

- To discretize the momentum, mass and energy transport equations by finite volume technique.
- To understand the subject of Computational Fluid Dynamics and know how to use it as tool to solve the Heat Transfer and Fluid Mechanics related Industrial Problems.
- To solve some problems with the help of the ANSYS Fluent software.

Department of Chemical Engineering, GGV M.Tech/2021-22

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPBTP2	FUEL CELL TECHNOLOGY	3:0:0	3

Course Objective: **New Course Introduced**

- Demonstrate a thorough understanding of the fuel cell power plant's and its components' performance characteristics
- Describe the performance and design characteristics of various fuel cells, as well as operational issues
- Discuss the design philosophy and challenges that must be overcome in order for this power plant to be economically viable
- Thermodynamics and electrochemistry will be the focus of the design and analysis

Course Content :

Low and high temperature fuel cells are discussed in this overview of hydrogen energy and fuel cells. Polymer electrolyte fuel cells, Alkaline fuel cells, Phosphoric fuel cells, Molten carbonate fuel cells, Solid oxide fuel cells, Microbial fuel cells, Fuel cell systems, and Sample calculations are all examples of fuel cell performance. Thermodynamics of fuel cells: heat, work potentials, reversible voltage prediction, and fuel cell efficiency. Electrocatalysts-design, activation kinetics, overvoltages, Tafel equation, charge transfer reaction, exchange currents, fuel cell reaction kinetics-electrode kinetics, overvoltages, Tafel equation, charge transfer reaction, exchange currents, electrocatalysts-design, activation kinetics Charge and mass transport in a fuel cell-flow field, transport in the electrode, and transport in the electrolyte Characterization of fuel cells-characterization techniques in-situ and ex-situ, I-V curve, frequency response analyses Materials Science and Engineering, Process Safety and Process Design

Course Outcomes :

At the end of the course, the student will be able to:

1. Apply know-how of thermodynamics, electrochemistry, heat transfer, and fluid mechanics principles to design and analysis of this emerging technology
2. Have thorough understanding of performance behaviour, operational issues and challenges for all major types of fuel cells
3. Identify, formulate, and solve problems related to fuel cell technology keeping in mind economic viability
4. Use the techniques, skills, and modern engineering tools necessary for design and analysis of innovative fuel cell systems
5. Understand the impact of this technology in a global and societal context

Texts Books :

- Larminie J. and Dicks A., Fuel Cell Systems Explained, John Wiley & Sons Inc.
- Barbir Frano, PEM Fuel Cells Theory and Practice. Elsevier Academic Press
- Hoogers G., Fuel Cell Technology Handbook, SAE International

Handwritten signatures and dates are present at the bottom of the page, including 'G. Mandala', '21/11/21', and '29/11/21'.

Department of Chemical Engineering, GGV

M.Tech-2021-22

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
CHPBTP3	PROCESS PLANT DESIGN & FLOW SHEETING	3:0:0	3

Course Objective :

New Course Introduced

- Understanding of the scope, principles, norms, accountabilities and bounds of contemporary engineering practice in the specific discipline
- Application of established engineering methods to complex engineering problem solving
- Application of systematic engineering synthesis and design processes

Course Content :

General design considerations, Layout of plant items, Flow sheets and PI diagrams, Economic aspects and Optimum design, Degrees of freedom analysis in interconnected systems, Network analysis, PERT/CPM, Direct and Indirect costs, Optimum scheduling and crashing of activities, Hierarchy of chemical process design, Synthesis of reaction-separation systems, Energy targets. Heat integration of reactors, distillation columns, evaporators and driers, Heat and mass exchange networks and network design, Algorithmic flow sheet generation using P-graph theory, Sequencing of operating units, Feasibility and optimization of flow sheet using various algorithms, Solution Structure Generation (SSG), Maximal Structure Generation (MSG), Simplex, Branch-and-bound etc., Analysis of Cost estimation, Estimation of capital investment and total product costs, Interest, Time value of money, Taxes and Fixed charges, Salvage value, Methods of calculating depreciation, Profitability, Alternative investments and replacements, Optimum Design and Design Strategy, Break-even analysis, Optimum production rates in plant operation.

Course Outcomes :

At the end of the course, the student will be able to:

1. Analyze, synthesize and design processes for manufacturing products commercially
2. Integrate and apply techniques and knowledge acquired in other courses such as thermodynamics, heat and mass transfer, fluid mechanics, instrumentation and control to design heat exchangers, plate and packed columns and engineering flow diagrams
3. Use commercial flow sheeting software to simulate processes and design process equipment
4. Recognize economic, construction, safety, operability and other design constraints
5. Estimate fixed and working capitals and operating costs for process plants

MSPBTO1	BUSINESS ANALYTICS	3:0:0	3

Course Objective :

- To understand the data analytics
- To develop the ability of critical thinking
- To develop technical skill in predicative modeling

New Course Introduced

Course Content :

Business analytics: Overview of Business analytics, Scope of Business analytics, Business Analytics Process, Relationship of Business Analytics Process and organisation, competitive advantages of Business Analytics. Statistical Tools: Statistical Notation, Descriptive Statistical methods, Review of probability distribution and data modelling, sampling and estimation methods overview. Trendiness and Regression Analysis: Modelling Relationships and Trends in Data, simple Linear Regression. Important Resources, Business Analytics Personnel, Data and models for Business analytics, problem solving, Visualizing and Exploring Data, Business Analytics Technology. Organization Structures of Business analytics, Team management, Management issues, Designing Information Policy, Outsourcing, Ensuring Data Quality, Measuring contribution of Business analytics, Managing Changes. Descriptive Analytics, predictive analytics, predicative Modelling, Predictive analytics analysis, Data Mining, Data Mining Methodologies, Prescriptive analytics and its step in the business analytics Process, Prescriptive Modelling, nonlinear Optimization. Forecasting Techniques: Qualitative and Judgmental Forecasting, Statistical Forecasting Models, Forecasting Models for Stationary Time Series, Forecasting Models for Time Series with a Linear Trend, Forecasting Time Series with Seasonality, Regression Forecasting with Casual Variables, Selecting Appropriate Forecasting Models. Monte Carlo Simulation and Risk Analysis: Monte Carle Simulation Using Analytic Solver Platform, New-Product Development Model, Newsvendor Model, Overbooking Model, Cash Budget Model. Decision Analysis: Formulating Decision Probiems, Decision Strategies with the without Outcome Probabilities, Decision Trees, the Value of Information, Utility and Decision Making. Recent Trends in Embedded and collaborative business intelligence, Visual data recovery, Data Storytelling and Data journalism.

Course Outcome :

At the end of the course, students will be able to :

- Students will demonstrate knowledge of data analytics
- Students will demonstrate the ability of think critically in making decisions based on data and deep analytics.
- Students will demonstrate the ability to use technical skills in predicative and prescriptive modeling to support business decision-making.

Department of Chemical Engineering, GGV

M.Tech-2021-22

SUBJECT CODE	SUBJECT NAME	L:T:P	CREDIT
IPPBT02	INDUSTRIAL SAFETY	3:0:0	3

Course Objective :

New Course Introduced

- Knowledge of safety measures and Engineering maintenance
- Knowledge of corrosion and their prevention

Course Content :

Industrial safety: Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods. Fundamentals of maintenance engineering: Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment. Wear and Corrosion and their prevention: Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods. Fault tracing: Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like, i. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes. Periodic and preventive maintenance: Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: i. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance

Course Outcome :

At the end of the course, students will be able to :

1. Apply the knowledge of Safety Measures
2. Plan for Engineering maintenance
3. Determine the wear & Corrosion and apply methods for their prevention

Department of Chemical Engineering, GGV

M. Tech-2021-22

SUBJECT CODE	SUBJECT NAME	L:T:P	Credit
CEPBT04	COST MANAGEMENT OF ENGINEERING PROJECTS	3:0:0	3

Course Content:

New Course introduced

- Introduction and Overview of the Strategic Cost Management Process
- Cost concepts in decision-making; relevant cost, Differential cost, Incremental cost and Opportunity cost. Objectives of a Costing System; Inventory valuation; Creation of a Database for operational control; Provision of data for Decision-Making.
- Project: meaning, Different types, why to manage, cost overruns centres, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and non-technical activities. Detailed Engineering activities. Pre project execution main clearances and documents Project team: Role of each member. Importance Project site: Data required with significance. Project contracts. Types and contents. Project execution Project cost control, Bar charts and Network diagram. Project commissioning: mechanical and process
- Cost Behavior and Profit Planning Marginal Costing; Distinction between Marginal Costing and Absorption Costing; Break-even Analysis, Cost-Volume-Profit Analysis. Various decision-making problems. Standard Costing and Variance Analysis. Pricing strategies: Pareto Analysis. Target costing, Life Cycle Costing. Costing of service sector. Just-in-time approach, Material Requirement Planning, Enterprise Resource Planning, Total Quality Management and Theory of constraints. Activity-Based Cost Management, Bench Marking; Balanced Score Card and Value-Chain Analysis. Budgetary Control; Flexible Budgets; Performance budgets; Zero-based budgets. Measurement of Divisional profitability pricing decisions including transfer pricing.
- Quantitative techniques for cost management, Linear Programming, PERT/CPM, Transportation problems, Assignment problems, Simulation, Learning Curve Theory.

Course Outcomes : At the end of the course, students will be able to

- 1 Discuss the cost concepts in the cost management process.
- 2 Able to handle the projects by the application of project cost control methods.
- 3 Determine all types of costing and carryout the analysis of pricings for profitability.
- 4 Application of PERT/CPM for cost management.

SUBJECT CODE	SUBJECT NAME	L:T:P	Credit
MEPBTO5	COMPOSITE MATERIALS	3:0:0	3

Course Contents:

New Course Introduced

- INTRODUCTION: Definition - Classification and characteristics of Composite materials. Advantages and application of composites. Functional requirements of reinforcement and matrix. Effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance.
- REINFORCEMENTS: Preparation-layup, curing, properties and applications of glass fibers, carbon fibers, Kevlar fibers and Boron fibers. Properties and applications of whiskers, particle reinforcements. Mechanical Behavior of composites; Rule of mixtures, Inverse rule of mixtures. Isostrain and Isostress conditions.
- Manufacturing of Metal Matrix Composites: Casting - Solid State diffusion technique, Cladding - Hot isostatic pressing. Properties and applications. Manufacturing of Ceramic Matrix Composites: Liquid Metal Infiltration - Liquid phase sintering. Manufacturing of Carbon - Carbon composites: Knitting, Braiding, Weaving. Properties and applications.
- Manufacturing of Polymer Matrix Composites: Preparation of Moulding compounds and prepregs - hand layup method - Autoclave method - Filament winding method - Compression moulding - Reaction injection moulding. Properties and applications.
- Strength: Lamina Failure Criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hygrothermal failure. Laminate first ply failure-insight strength; Laminate strength-ply discount truncated maximum strain criterion; strength design using caplet plots; stress concentrations

Course Outcomes:

At the end of the course, students will be able to

- 1 Explain and also implement the composite materials for the required performance based on the characteristics.
- 2 Adopt the composite materials as reinforcements.
- 3 Implement the methods of manufacturing of metal matrix composites
- 4 Adopt the methods of manufacturing of polymer matrix composites
- 5 Evaluate the strength of laminates.

SUBJECT CODE	SUBJECT NAME	L:T:P	Credit
CHPBT06	WASTE TO ENERGY	3:0:0	3

New Course Introduced

Course Contents:

Introduction to Energy from Waste: Classification of waste as fuel - Agro based, Forest residue, Industrial waste - MSW - Conversion devices - Incinerators, gasifiers, digestors Biomass Pyrolysis: Pyrolysis - Types, slow, fast - Manufacture of charcoal - Methods - Yields and application - Manufacture of pyrolytic oils and gases, yields and applications. Biomass Gasification: Gasifiers - Fixed bed system - Downdraft and updraft gasifiers - Fluidized bed gasifiers - Design, construction and operation - Gasifier burner arrangement for thermal heating - Gasifier engine arrangement and electrical power - Equilibrium and kinetic consideration in gasifier operation. Biomass Combustion: Biomass stoves - Improved chullahs, types, some exotic designs, fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation - Operation of all the above biomass combustors. Biogas: Properties of biogas (Calorific value and composition) - Biogas plant technology and status - Bio energy system - Design and constructional features - Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion - Direct combustion - biomass gasification - pyrolysis and liquefaction - biochemical conversion - anaerobic digestion - Types of biogas Plants - Applications - Alcohol production from biomass, Bio diesel production - Urban waste to energy conversion - Biomass energy programme in India.

Course Outcomes:

At the end of the course, students will be able to

- 1 Classify the waste for fuel and identify the devices for conversion of waste to energy.
- 2 Implement the Biomass Pyrolysis
- 3 Evaluate the methods of Biomass Gasification and implement their applications.
- 4 To design, construct and operation the Biomass Combustion devices.
- 5 Classify biomass, apply the bio energy systems design and construction.

SUBJECT CODE	SUBJECT NAME	L:T:P	Credit
ECPBT07	INTERNET OF THINGS (IoT)	3:0:0	3

New Course Introduced

Course Contents:

- > Review of computer communication concepts (OSI layers, components, packet communication, Networks, TCP-IP, subnetting, IPV4 addressing and challenges), IPV6 addressing, IoT architecture reference layer, Characteristics IoT sensor nodes, Edge computer, cloud and peripheral cloud, single board computers, open source hardware, Examples of IoT infrastructure.
- > IoT and M2M, Software defined networks, network function virtualization, difference between SDN and NFV for IoT, Basics of IoT System Management with NETCOZF, YANG- NETCONF, YANG, SNMP NETOPEER.
- > IOT protocols and Communication Technologies, MQTT, UDP, MQTT brokers, publish subscribe modes, HTTP, COAP, XMPP and gateway protocols, IoT Communication Pattern, IoT Protocol Architecture, Selection of Wireless technologies (6LoWPAN, Zigbee, WIFI, BT, BLE, SIG, NFC, LORA, Lifi, Widi).
- > Data and Analytics for IoT, An Introduction to Data Analytics for IoT, Machine Learning, Big Data Analytics Tools and Technology, Edge Streaming Analytics, Network Analytics, Securing IoT, A Brief History of IOT Security, Common Challenges in IOT Security, How IT and OT Security Practices and Systems Vary, Formal Risk Analysis Structures: OCTAVE and FAIR, The Phased Application of Security in an Operational Environment.
- > IoT Physical Devices and Endpoints: Introduction to Arduino and Raspberry Pi- Installation, Interfaces (serial, SPI, I2C), Programming - Python program with Raspberry PI with focus on interfacing external gadgets, controlling output, reading input from pins.
- > IoT Physical Servers and Cloud Offerings: Introduction to Cloud Storage models and communication APIs WebServer: Web server for IoT, Cloud for IoT, Python web application framework Designing a RESTful web API.
- > IoT application and its Variants: Case studies: IoT for smart cities, smart grid, health care, agriculture, smart meters. M2M, Web of things, Cellular IoT, Industrial IoT, Industry 4.0, IoT standards.

Course Outcomes:

At the end of the course, students will be able to

- 1 Understand the concepts of Internet of Things.
- 2 Analyze basic protocols in wireless sensor network.

SUBJECT CODE	SUBJECT NAME	L:T:P	Audit
ELPBTX1	ENGLISH FOR RESEARCH PAPER WRITING	2:0:0	2

New Course Introduced

Course Contents:

- Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness
- Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticizing, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts, Introduction
- Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check
- Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Useful phrases, how to ensure paper is as good as it could possibly be the first-time submission review of the Literature.
- skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions
- useful phrases, how to ensure paper is as good as it could possibly be the first-time submission

Course Outcomes:

At the end of the course, students will be able to

- 1 Understand that how to improve your writing skills and level of readability.
- 2 Learn about what to write in each section
- 3 Understand the skills needed when writing a Title
- 4 Ensure the good quality of paper at very first-time submission

PEPBTX2	STRESS MANAGEMENT BY YOGA	2:0:0	2

Course Contents: **New Course Introduced**

- Definitions of Eight parts of yog. (Ashtanga).
- Yam and Niyam, Do's and Don't's in life, i) Ahinsa, satya, asthaya, bramhacharya and aparigraha, ii) Shaucha, santosh, tapa, swadhyay, ishwarpranidhan.
- Asan and Pranayam, i) Various yog poses and their benefits for mind & body, ii) Regularization of breathing techniques and its effects-Types of pranayam.

Course Outcomes:
At the end of the course, students will be able to

- 1 Develop healthy mind in a healthy body thus improving social health also.
- 2 Improve efficiency

Reference Books :

CEPBTX3	DISASTER MANAGEMENT	2:0:0	2

New Course Introduced

Course Contents:

- Introduction Disaster: Definition, Factors and Significance; Difference between Hazard and Disaster; Natural and Manmade Disasters: Difference, Nature, Types and Magnitude.
- Repercussions of Disasters and Hazards: Economic Damage, Loss of Human and Animal Life, Destruction of Ecosystems. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts and Famines, Landslides and Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks and Spills, Outbreaks of Disease and Epidemics, War and Conflicts.
- Disaster Prone Areas in India, Study of Seismic Zones; Areas Prone To Floods and Droughts, Landslides and Avalanches; Areas Prone to Cyclonic and Coastal Hazards with special reference to Tsunami; Post-Disaster Diseases and Epidemics.
- Disaster Preparedness and Management: Preparedness: Monitoring of Phenomena Triggering a Disaster or Hazard; Evaluation of Risk; Application of Remote Sensing, Data from Meteorological and other agencies, Media Reports: Governmental and Community Preparedness.
- Risk Assessment: Disaster Risk: Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. Techniques of Risk Assessment, Global Co-Operation in Risk Assessment and Warning, People's Participation in Risk Assessment. Strategies for Survival.
- Disaster Mitigation: Meaning, Concept and Strategies of Disaster Mitigation, Emerging Trends in Mitigation. Structural Mitigation and Non-Structural Mitigation, Programs of Disaster Mitigation in India.

Course Outcomes :

At the end of the course, students will be able to

- 1 Learn to demonstrate a critical understanding of key concepts in disaster risk reduction and humanitarian response.
- 2 Critically evaluate disaster risk reduction and humanitarian response policy and practice from multiple perspectives
- 3 Develop an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations
- 4 Critically understand the strengths and weaknesses of disaster management approaches, planning and programming in different countries, particularly their home country or the countries they work in

Garh
Chandab

SUBJECT CODE	SUBJECT NAME	L:T:P	Audit
LAPBTX4	CONSTITUTION OF INDIA	2:0:0	2

New Course Introduced

Course Contents:

- > History of Making of the Indian Constitution: History Drafting Committee, (Composition & Working).
- > Philosophy of the Indian Constitution: Preamble, Salient Features
- > Contours of Constitutional Rights & Duties: Fundamental Rights, Right to Equality, Right to Freedom, Right against Exploitation, Right to Freedom of Religion, Cultural and Educational Rights, Right to Constitutional Remedies, Directive Principles of State Policy, Fundamental Duties.
- > Organs of Governance: Parliament, Composition, Qualifications and Disqualifications, Powers and Functions, Executive, President, Governor, Council of Ministers, Judiciary, appointment and Transfer of Judges, Qualifications, Powers and Functions.
- > Local Administration: District's Administration head: Role and Importance, Municipalities: Introduction, Mayor and role of Elected Representative, CEO of Municipal Corporation. Pachayati raj: Introduction, PRI: ZilaPachayat. Elected officials and their roles, CEO ZilaPachayat: Position and role. Block level: Organizational Hierarchy (Different departments), Village level: Role of Elected and Appointed officials, Importance of grass root democracy.
- > Election Commission: Election Commission: Role and Functioning, Chief Election Commissioner and Election Commissioners, State Election Commission: Role and Functioning, Institute and Bodies for the welfare of SC/ST/OBC and women.

Course Outcomes:

At the end of the course, students will be able to

- 1 Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.
- 2 Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India.
- 3 Discuss the circumstances surrounding the foundation of the Congress Socialist Party [CSP] under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution.
- 4 Discuss the passage of the Hindu Code Bill of 1956.
