ABSTRACT

Information literacy (IL) is best addressed at multiple levels in the education process. Information literate students are more effective consumers of information resources. It has become a lot evident that students cannot learn everything they have to grasp in their field of study. Data acquisition equips them with the important skills necessary to become freelance long learners. At the same time, educators and researchers should grapple with shaping the standards and competencies related to data acquisition, develop effective new ways that to interact learners and live the end result and impact of such learning. In Indian context once lecturers encourage students to try to their own analysis, students take responsibility for his or her learning, and that they retain a lot of the data they need gathered for them. This, in turn, creates a greater responsibility towards their OWN LEARNING

Abstract

Researcher or a student, anyone who need information have their own, different purposes behind it. And in order to fulfill their information requirements, they follow a defined sequence of steps that eventually constitute information seeking. This particular behavior involves the understanding of people who need certain information, what type of information and what is the purpose behind this need and eventually how this much needed information is found. It also looks at how this information is evaluated, used for their defined purposes. It is observed that information seeking is carried out purposefully by users which involves stages like searching, selecting, evaluating and finally meeting their needs. Libraries and information centers strive hard to meet the information needs of their clientele. Libraries always feel that it is their obligation to satisfy the research and other information needs of their users through quality information support services. In this age of internet, the web-based library services play a defining role in effectively providing information to their users. The dynamics of web-based environment provides multiple platforms and ways to seek information. With increase in integration of ICT in libraries, the higher education has witnessed a paradigm shift in the research and information seeking behavior in the social science discipline. It is observed that researchers tend to use a variety of information products in various digital formats and do so in multiple ways. Extensive use of internet by social science researchers has grown to become a remarkable phenomenon that has changed the dynamics of information seeking process itself.

Abstract

Satisfying the requirements of library users is the primary aim of central libraries as well as of central university librarians. It is frequently heard the complaints from the university library users' side that they were dissatisfied with either on library services, or on library collections, or on library staff's attitude, or on library infrastructure. Keeping a close watch on this complaint and on the profound importance of Economics discipline in today's globalized world, this study was undertaken which is confined to library users comprising librarians, and regular students & permanent teaching staff of Economics department. Questionnaire method was adopted for collecting data in this study.

ABSTRACT

A catalogue may be helpful in identifying know items or known works when some attributes can be used as search keys (e.g. author name or title). In electronic catalogues a combination of search keys such as words from titles and printing year may be used for known item searching. A catalogue may also be helpful in identifying not know items dealing with a particular subject such as World War II. These last kinds of searches are especially facilitated by classification codes (such as Dewey Decimal Classification codes) or subject terms (such as Library of Congress Subject Headings) in the records.

ABSTRACT

In the present knowledge era, the library is considered as an important centre and is the heart of any institute. The libraries are acquiring different types of resources and providing services to fulfill the needs of their clients. To strengthen the collection and services of the library the user's feedback helps much.

Abstract

Academic libraries are the treasure house of knowledge which cater to the needs of scholars, scientists, technocrats, researchers, students and others who are in the mainstream of higher education. Education has ever been looked at Indian culture as a holistic effort since time immemorial. Today the Higher Education is controlled and maintained by the University Grants Commission in India. They keep the quality of education on par with the international standards, which is a heritage India acquired since the British occupation. India possesses a highly developed higher education system which offers facility of education and training in almost all aspects of human creative and intellectual endeavors: arts and humanities; natural, mathematical and social sciences, engineering; medicine; dentistry; agriculture; education; law; commerce and management; music and performing arts; national and foreign languages; culture; communications etc.

Abstract

User study is the means for systematic examination of the characteristics and behavior of the users of the systems and services. The user study is directly linked with the effectiveness(performance) of the library and information services provided as they aim at satisfaction of user needs. My aim is to study UG and PG students of Department of Library Science and find out information seeking behaviors and To study how much time spend library and what kind of services used by them. Survey research is one of the most important areas of measurement in pure and applied physics research. The broad area of survey research encompasses any measurement procedures that involve asking questions of respondents. This survey carried out based on questionnaires . Questionnaires were usually google form that the respondent completes. finally results is found out that all student want comes to library and also spent maximum time of 2 hour. OPAC Service use very few. there have a little knowledge of kiosk service. librarian should have to pay attention about this matter and also literate the user. if it happened the arrive of library resource.
