ABSTRACT

The present study evaluates the impact of COVID – 19 on Digital Education Platforms in India and the response of the students towards these platforms. Students and parents alike are concerned about school closures and the decision to convert traditional classrooms to digital platforms. However, there are several digital platforms that offer online education to students and also prepare them for prestigious competitive tests such as UPSC, JEE, NEET, and so on. The involvement of skilled teachers who are experts in digital education, as well as the user friendly design of these platforms, allows for effective digital learning. The primary data was obtained from 100 respondents by conducting a field survey. The objective is to recognize which digital platform is preferred by the most number of students.

Keywords: Digital platform, education, competitive exams, students.

INTRODUCTION:

The COVID-19 outbreak in India has awarded online education an unanticipated boost, allowing students to continue their formal education while schools, colleges and coaching institutes were closed to prevent the virus from spreading. The schools and colleges were ending up the 2019-20 academic session as the whole nation fell into lockdown at the conclusion of March 2020. By May, due to an increase in COVID-19 incidents around the nation, it was no longer feasible to start offline classes for the new academic session. In India, the Coronavirus pandemic has shut down shops, companies, businesses, schools, and colleges, forcing people to remain at homes. The shutdown and
